STK400-490**SANYO****3ch AF Power Amplifier (Split Power Supply)
25W + 50W + 25W, THD = 0.4%**

Overview

The STK400-490 is an audio power amplifier IC for multi-channel speaker applications. It comprises two 25W channels (left and right) and a 50W channel (center) in a single package. It is fully pin compatible with the 3-channel output devices (STK400-x00 series) and 2-channel output devices (STK401-x00 series). In addition, it supports $6/3\Omega$ output load impedance.

Features

- Pin compatible with the 3-channel output devices (STK400-x00 series) and 2-channel output devices (STK401-x00 series)
- Output load impedance $R_L = 6/3\Omega$ supported
- Pin configuration grouped into individual blocks of inputs, outputs and supply lines to minimize the adverse effects of pattern layout on operating characteristics.
- Few external components

Specifications

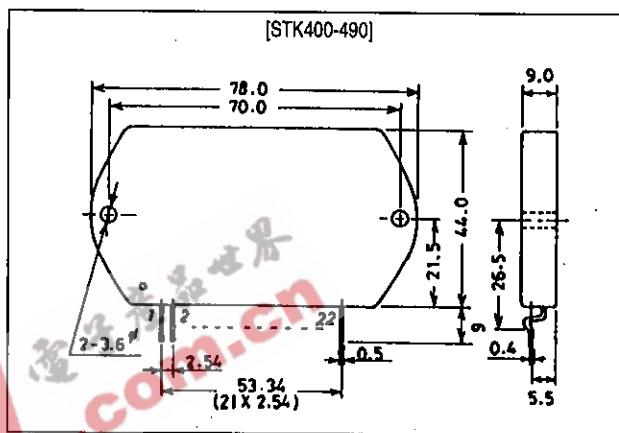

Maximum Ratings at $T_a = 25^\circ\text{C}$

Parameter	Channel	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	L, R	V_{CC} max (1)		± 36	V

Notes.

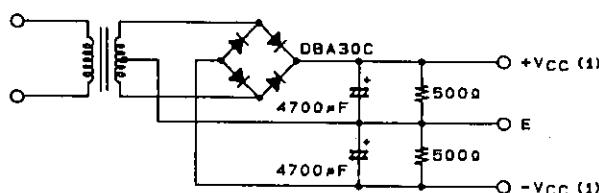

All tests are measured using a constant-voltage supply unless otherwise specified.

Available time for load short-circuit and output noise voltage are measured using the transformer supply specified below.

The output noise voltage is the peak value of an average-reading meter with an rms value scale (VTVM). A regulated AC supply (50Hz) should be used to eliminate the effects of AC primary line flicker noise.
