STK400-060

AF Power Amplifier (Split Power Supply) (35W+35W+35W, THD = 0.4%)

Overview

The STK400-060 is a 3-channel AF power amplifier IC supporting multichannel speakers. One package includes 35W×3ch for Lch, Rch and Cch. It is pin compatible with both 3-channel output devices (STK400-*00 series) and 2-channel output devices (STK401-*00 series). The output load impedance is 6/3Ω.

Features

- New series combining 3-channel output devices (STK400-*00 series) and 2-channel output devices (STK401-*00 series) with the same pin compatibility.
- Output load impedance is 6/3Ω.
- Pin assignment is grouped into individual blocks of inputs, outputs and supply lines, minimizing the adverse effects of pattern layout on operating characteristics.
- Minimum nmber of external components required.

Package Dimensions

unit: mm

Parameter	Symbol	Conditions	min	typ	max	Unit
Frequency response	f_L, f_H	V_{CC} = ±28V, P_O = 1.0W, $^{+0}_{-3}$dB	–	20 to 50k	–	Hz
Input impedance	r_i	V_{CC} = ±28V, f = 1kHz, P_O = 1.0W	–	55	–	kΩ
Output noise voltage	V_{NO}	V_{CC} = ±34V, Rg = 10kΩ	–	–	1.2	mVrms
Quiescent current	I_{CCO}	V_{CC} = ±34V	30	90	150	mA
Neutral voltage	V_N	V_{CC} = ±34V	–70	0	+70	mV

Notes.
All tests are conducted using a constant-voltage regulated power supply unless otherwise specified.
Available time for load short-circuit and output noise voltage are measured using the transformer power supply specified on page 1.
The output noise voltage is the peak value of an average-reading meter with an rms value scale (VTVM). A regulated AC supply (50Hz) should be used to eliminate the effects of AC primary line flicker noise.

V_{CC} max1 (R_L = 6Ω), V_{CC} max2 (R_L = 3 to 6Ω), $V_{CC}1$ (R_L = 6Ω), $V_{CC}2$ (R_L = 3Ω)

Heatsink Design Considerations

The heatsink thermal resistance, θc-a, required to cover the hybrid IC's total power dissipation, Pd, is determined as follows:

Condition 1: Hybrid IC's substrate temperature not to exceed 125°C.

$Pd \times \theta c\text{-}a + Ta < 125°C$ .... (1)

where Ta is the guaranteed maximum ambient temperature.

Condition 2: Power transistor junction temperature, Tj, not to exceed 150°C.

$Pd \times \theta c\text{-}a + Pd/N \times \theta j\text{-}c + Ta < 150°C$ .... (2)

where N is the number of power transistors and θj-c is the thermal resistance per power transistor. Note that the power dissipated per transistor is the total, Pd, divided evenly among the N power transistors.

Expressions (1) and (2) can be rewritten making θc-a the subject.

$\theta c\text{-}a < (125 - Ta)/Pd$ .... (1)′

$\theta c\text{-}a < (150 - Ta)/Pd - \theta j\text{-}c/N$ .... (2)′

The heatsink required must have a thermal resistance that simultaneously satisfies both expressions.

The heatsink thermal resistance can be determined from (1)′ and (2)′ once the following parameters have been defined.

- Supply voltage : V_{CC}
- Load resistance : R_L
- Guaranteed maximum ambient temperature : Ta

The total device power dissipation when hybrid IC's V_{CC} = ±28V and R_L = 6Ω, for a continuous sine wave signal, is a maximum of 81W, as is in Pd-P_O graph.

When estimating the power dissipation for an actual audio signal input, the rule of thumb is to select Pd corresponding to 1/10 P_O max (within safe limits) for a continuous sine wave input. For example,

Pd = 49.2W (for 1/10 P_O max = 3.5W)

The hybrid IC has 6 power transistors, and the thermal resistance per transistor, θj-c, is 1.8°C/W. If the guaranteed maximum ambient temperature, Ta, is 50°C, then the required heatsink thermal resistance, θc-a, is:

From expression (1)′: θc-a $< (125 - 50)/49.2$
< 1.52

From expression (2)′: θc-a $< (150 - 50)/49.2 - 1.8/6$
< 1.73

Therefore, to satisfy both expressions, the required heatsink must have a thermal resistance less than 1.52°C/W.

Similarly, when hybrid IC's V_{CC} = ±23V and R_L = 3Ω:

Pd = 58W (for 1/10 P_O max = 3.5W)

From expression (1)′: θc-a $< (125 - 50)/58$
< 1.29

From expression (2)′: θc-a $< (150 - 50)/58 - 1.8/6$
< 1.42

Therefore, to satisfy both expressions, the required heatsink must have a thermal resistance less than 1.29°C/W.

This heatsink design example is based on a constant-voltage supply, and should be verified within your specific set environment.
