TEXAS INSTRUMENTS

TS3A4751 0.9-Ω LOW-VOLTAGE SINGLE-SUPPLY QUAD SPST ANALOG SWITCH

www.ti.com

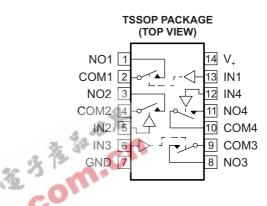

SCDS227C-JULY 2006-REVISED SEPTEMBER 2006

FEATURES

- Low ON-State Resistance (r_{on})
 - 0.9 Ω Max (3-V Supply)
 - 1.5 Ω Max (1.8-V Supply)
- r_{on} Flatness: 0.4 Ω Max (3-V)
- r_{on} Matching
 - 0.05 Ω Max (3-V Supply)
 - 0.25 Ω Max (1.8-V Supply)
- 1.6-V to 3.6-V Single-Supply Operation
- 1.8-V CMOS Logic Compatible (3-V Supply)
- High Current-Handling Capacity (100 mA Continuous)
- Fast Switching: t_{ON} = 14 ns, t_{OFF} = 9 ns
- ESD Protection Exceeds JESD-22
 - 4000-V Human Body Model (A114-A)
 - 300-V Machine Model (A115-A)
 - 1000-V Charged Device Model (C101)

APPLICATIONS

- Power Routing
- Battery Powered Systems
- Audio and Video Signal Routing
- Low-Voltage Data-Acquisition Systems
- Communications Circuits
- PCMCIA Cards
- Cellular Phones
- Modems
- Hard Drives

DESCRIPTION/ORDERING INFORMATION

The TS3A4751 is a low ON-state resistance (r_{on}) , low-voltage, quad, single-pole/single-throw (SPST) analog switch that operates from a single 1.6-V to 3.6-V supply. This device has fast switching speeds, handles rail-to-rail analog signals, and consumes very low quiescent power.

The digital input is 1.8-V CMOS compatible when using a single 3-V supply.

The TS3A4751 has four normally open (NO) switches. The TS3A4751 is available in a 14-pin thin shrink small-outline package (TSSOP).

ORDERING INFORMATION

T _A	PACKAG	GE ⁽¹⁾	ORDERABLE PART NUMBER	TOP-SIDE MARKING	
-40°C to 85°C	TSSOP – PWR	Reel of 2000	TS3A4751PWR	YC751	

(1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

FUNCTION	TABLE
-----------------	-------

IN	NO TO COM, COM TO NO
L	OFF
Н	ON

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Absolute Maximum Ratings⁽¹⁾

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V ₊	Supply voltage range referenced to GND ⁽²⁾	-0.3	4	V	
V _{NO} V _{COM} V _{IN}	Analog and digital voltage range	g and digital voltage range			
I _{NO} I _{COM}	On-state switch current	V_{NO} , $V_{COM} = 0$ to V_{+}	-100	100	mA
I ₊ I _{GND}	Continuous current through $V_{\rm +}$ or GND	V ₊ or GND		±100	mA
	Peak current pulsed at 1 ms, 10% duty cycle	COM, V _{I/O}		±200	mA
θ_{JA}	Package thermal impedance (3)		88	°C/W	
T _A	Operating temperature range	-40	85	°C	
TJ	Junction temperature		150	°C	
T _{stg}	Storage temperature range	-65	150	°C	

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

 (2) Signals on COM or NO exceeding V₊ or GND are clamped by internal diodes. Limit forward diode
(3) The package thermal impedance is measured in accordance with JESD 51-7. Signals on COM or NO exceeding V+ or GND are clamped by internal diodes. Limit forward diode current to maximum current rating. (2)

TS3A4751 0.9-Ω LOW-VOLTAGE SINGLE-SUPPLY QUAD SPST ANALOG SWITCH

SCDS227C-JULY 2006-REVISED SEPTEMBER 2006

Electrical Characteristics for 3-V Supply⁽¹⁾⁽²⁾

 V_{+} = 2.7 V to 3.6 V, T_{A} = –40°C to 85°C, V_{IH} = 1.4 V, V_{IL} = 0.5 V (unless otherwise noted).

(1) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum.

(2) Parts are tested at 85°C and specified by design and correlation over the full temperature range.

(3) Typical values are at $V_+ = 3 V$, $T_A = 25^{\circ}C$.

(4)

 $\Delta r_{on} = r_{on(max)} - r_{on(min)}$ Flatness is defined as the difference between the maximum and minimum value of r_{on} as measured over the specified analog signal (5) ranges.

Leakage parameters are 100% tested at the maximum-rated hot operating temperature and specified by correlation at $T_A = 25^{\circ}C$. (6)

OFF isolation = $20_{log}10 (V_{COM}/V_{NO}), V_{COM}$ = output, V_{NO} = input to OFF switch (7)

Electrical Characteristics for 1.8-V Supply⁽¹⁾⁽²⁾

V₊ = 1.65 V to 1.95 V, T_A = -40°C to 85°C, V_{IH} = 1 V, V_{IL} = 0.4 V (unless otherwise noted)

APPLICATION INFORMATION

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings because stresses beyond the listed ratings can cause permanent damage to the devices. Always sequence V_{+} on first, followed by NO or COM.

Although it is not required, power-supply bypassing improves noise margin and prevents switching noise propagation from the V₊ supply to other components. A 0.1- μ F capacitor, connected from V₊ to GND, is adequate for most applications.

Logic Inputs

The TS3A4751 logic inputs can be driven up to 3.6 V, regardless of the supply voltage. For example, with a 1.8-V supply, IN may be driven low to GND and high to 3.6 V. Driving IN rail to rail minimizes power consumption.

Analog Signal Levels

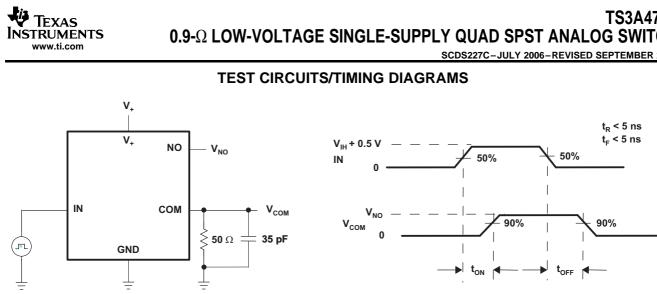

Analog signals that range over the entire supply voltage (V_{+} to GND) can be passed with very little change in r_{on} (see Typical Operating Characteristics). The switches are bidirectional, so NO and COM can be used as either inputs or outputs.

Layout

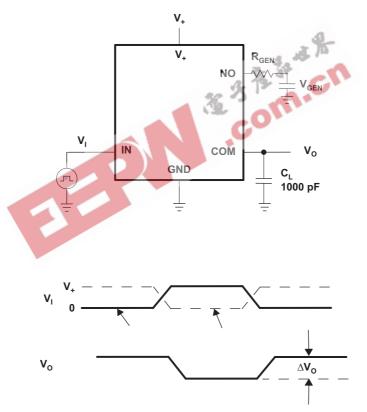

High-speed switches require proper layout and design procedures for optimum performance. Reduce stray inductance and capacitance by keeping traces short and wide. Ensure that bypass capacitors are as close to the device as possible. Use large ground planes where possible.

SCDS227C-JULY 2006-REVISED SEPTEMBER 2006

TEST CIRCUITS/TIMING DIAGRAMS (continued)

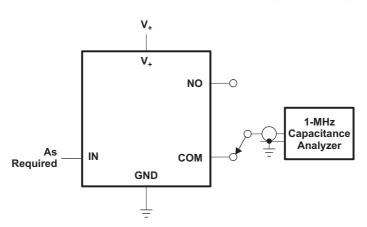

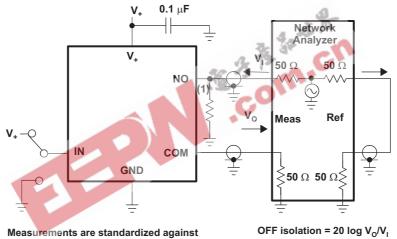

Figure 16. NO and COM Capacitance

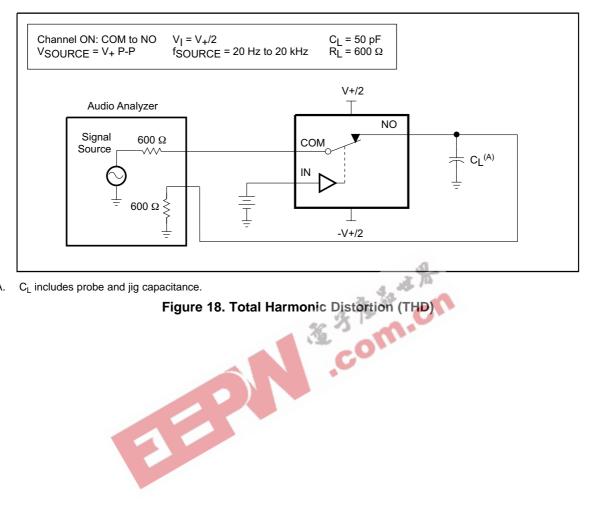

short at socket terminals. OFF isolation is measured between COM and OFF terminals on each switch. Bandwidth is measured between COM and ON terminals on each switch. Signal direction through switch is reversed; worst values are recorded.

PACKAGING INFORMATION

Orderable Device	Status ⁽¹⁾	Package Type	Package Drawing	Pins I	Package Qty	e Eco Plan ⁽²⁾	Lead/Ball Finish	MSL Peak Temp ⁽³⁾
TS3A4751PWR	ACTIVE	TSSOP	PW	14	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
TS3A4751PWRG4	ACTIVE	TSSOP	PW	14	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details. **TBD:** The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
