

SANYO**LC75842E****General-Purpose 1/2 Duty LCD Display Driver****Overview**

The LC75842E is a 1/2 duty general-purpose LCD display driver for applications such as microprocessor-controlled electronic tuning. It can drive up to 54 segments directly.

Features

- 1/2 duty, 1/2 bias drive of up to 54 segments
- Serial data input supports CCB* format communication with the system controller.
- Backup function which is based on a power saving mode and all segments off functions that are controlled by serial data.
- High generality, since display data is displayed directly without decoder intervention.
- The display can be forced to the off state with the $\overline{\text{INH}}$ pin.
- RC oscillator circuit

- CCB is a trademark of SANYO ELECTRIC CO., LTD.
- CCB is SANYO's original bus format and all the bus addresses are controlled by SANYO.

Package Dimensions

unit: mm

3162B-QFP36**Specifications****Absolute Maximum Ratings at $T_a = 25^\circ\text{C}$, $V_{SS} = 0\text{ V}$**

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	$V_{DD\text{ max}}$	V_{DD}	-0.3 to +6.5	V
Input voltage	V_{IN1}	CE, CL, DI, $\overline{\text{INH}}$	-0.3 to +6.5	V
	V_{IN2}	OSC	-0.3 to $V_{DD} + 0.3$	V
Output voltage	V_{OUT}	OSC, S1 to S27, COM1, COM2	-0.3 to $V_{DD} + 0.3$	V
Output current	I_{OUT1}	S1 to S27	100	μA
	I_{OUT2}	COM1, COM2	1	mA
Allowable power dissipation	$P_{d\text{ max}}$	$T_a = 85^\circ\text{C}$	100	mW
Operating temperature	T_{opr}		-40 to +85	$^\circ\text{C}$
Storage temperature	T_{stg}		-55 to +125	$^\circ\text{C}$

Allowable Operating Ranges at $T_a = -40$ to $+85^\circ\text{C}$, $V_{SS} = 0\text{ V}$

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Supply voltage	V_{DD}	V_{DD}^*	4.0	5.0	6.0	V
Input high level voltage	V_{IH}	CE, CL, DI, $\overline{\text{INH}}$	$0.8 V_{DD}$		6.0	V
Input low level voltage	V_{IL}	CE, CL, DI, $\overline{\text{INH}}$	0		$0.2 V_{DD}$	V
Recommended external resistance	R_{OSC}	OSC		68		$\text{k}\Omega$
Recommended external capacitance	C_{OSC}	OSC		680		pF
Guaranteed oscillator range	f_{OSC}	OSC	25	50	100	kHz

Note: * Please contact your Sanyo sales representative if you need to operate the LC75842E at a power supply voltage V_{DD} of 3.0 V (min.).

Pin Assignment

Block Diagram

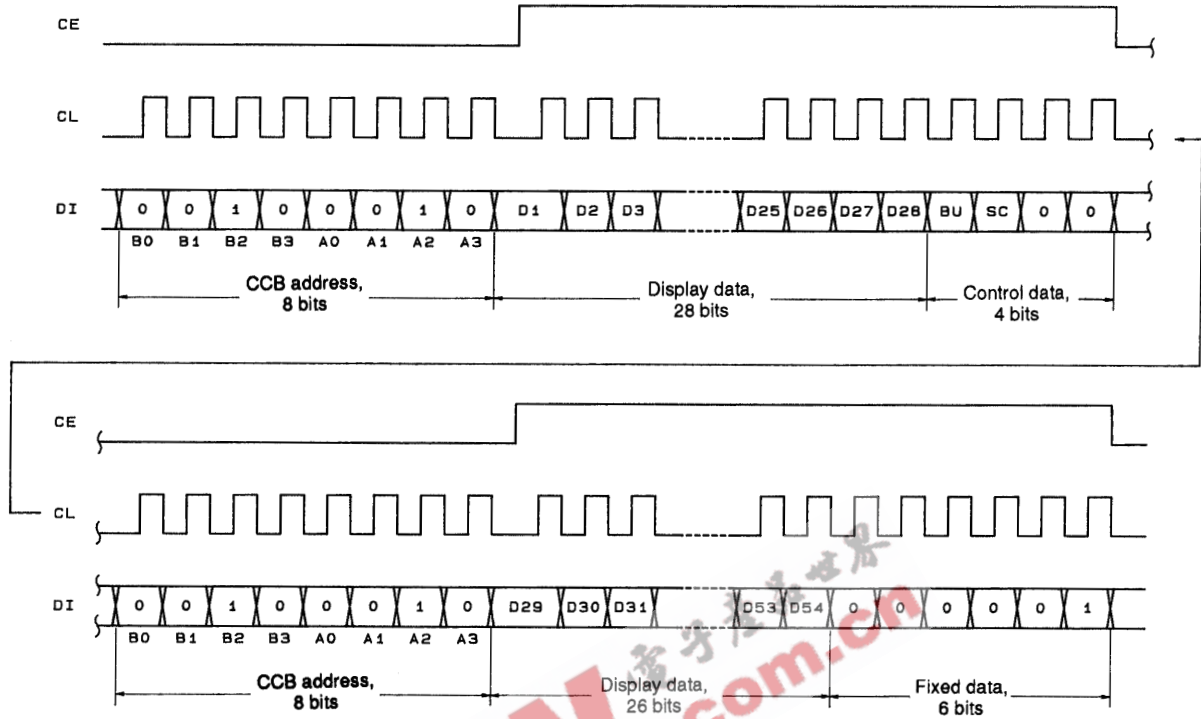

Pin Functions

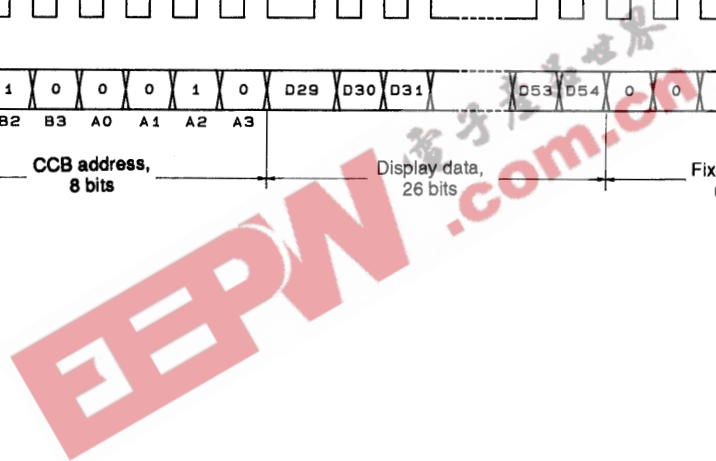

Pin	Pin No.	Function	Active	I/O	Handling when unused
S1 to S27	1 to 27	Segment outputs for displaying the display data transferred by serial data input.	—	O	Open
COM1 COM2	36 35	Common driver outputs. The frame frequency f_0 is $f_{osc}/512$ Hz.	—	O	Open
OSC	28	Oscillator connection. An oscillator circuit is formed by connecting an external resistor and capacitor at this pin.	—	I/O	V_{DD}
CE CL DI	32 33 34	Serial data transfer inputs. Must be connected to the control microprocessor. CE: Chip enable CL: Synchronization clock DI: Transfer data	H	I	GND
\overline{INH}	30	Display off control input \overline{INH} = low (V_{SS}).....Display off (S1 to S27, COM1 and COM2 = low) \overline{INH} = high (V_{DD}).....Display on However, serial data transfer is possible when the display is forced off by this pin.	L	I	GND
V_{DD}	29	Power supply. Provide a power supply voltage of between 4.0 and 6.0 V.	—	—	—
V_{SS}	31	Power supply. Connect this pin to ground.	—	—	—

Serial Data Transfer Format

1. When CL is stopped at the low level

A03187

2. When CL is stopped at the high level

Figure 2

- CCB address.....44_H
- D1 to D54.....Display data
 D_n (n = 1 to 54) = 1: Segment on
 D_n (n = 1 to 54) = 0: Segment off
- BUControl data for specifying normal mode or power saving mode
- SC.....Control data for specifying all segments on or off

Serial Data Transfer Example

When 29 or more segments are used all 80 bits of the serial data must be sent.

When fewer than 29 segments are used only the first 40 bits of the serial data can be sent. However, all 80 bits must be sent after power is first applied.

Note: The following type of transfer cannot be used when fewer than 29 segments are used.

Control Data Functions

1. BU: Control data for specifying normal mode or power saving mode

This control data bit is used to control the normal mode/power saving mode state of the LC75842E.

BU	Mode
0	Normal mode
1	Power saving mode (The OSC pin oscillator is stopped and the common and segment pins go to the V _{SS} level.)

2. SC: Control data for specifying all segments on or off

This control data bit is used to turn all segments on or off.

SC	Display state
0	On
1	Off

Note that when SC is 1 the display is turned off by outputting the segment off waveforms from the segment pins.

Correspondence between Display Data and Segment Output Pins

Segment output pin	COM1	COM2	Segment output pin	COM1	COM2
S1	D1	D2	S15	D29	D30
S2	D3	D4	S16	D31	D32
S3	D5	D6	S17	D33	D34
S4	D7	D8	S18	D35	D36
S5	D9	D10	S19	D37	D38
S6	D11	D12	S20	D39	D40
S7	D13	D14	S21	D41	D42
S8	D15	D16	S22	D43	D44
S9	D17	D18	S23	D45	D46
S10	D19	D20	S24	D47	D48
S11	D21	D22	S25	D49	D50
S12	D23	D24	S26	D51	D52
S13	D25	D26	S27	D53	D54
S14	D27	D28			

For example, the table below lists the output states for the S11 segment output pin.

Display data		Segment output pin (S11) state
D21	D22	
0	0	Both segments for COM1 and COM2 are off.
0	1	Segment for COM2 is on.
1	0	Segment for COM1 is on.
1	1	Both segments for COM1 and COM2 are on.

Output Waveforms (1/2 duty, 1/2 bias drive)

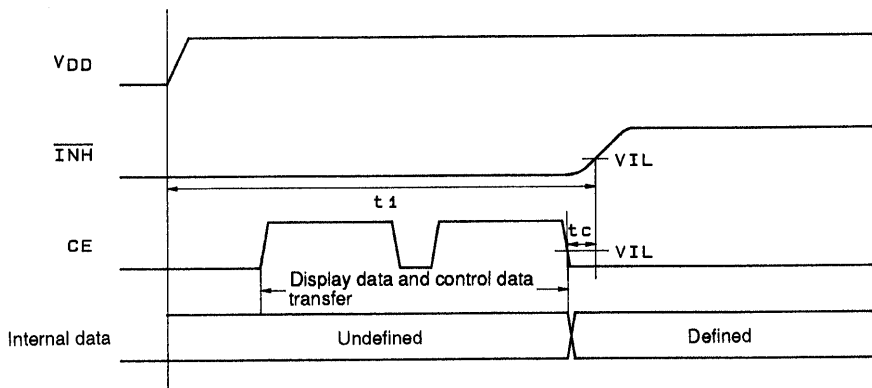

A03198

INH and Display Control

Since the LSI internal data (D1 to D54 and control data) is undefined when power is first applied, the display is turned off (S1 to S27, COM1 and COM2 = low) by setting \overline{INH} pin low at the same time as power is applied. Then, meaningless display at the power on can be prevented by transferring all 80 bits of serial data from the controller while the display is turned off and \overline{INH} pin high after the transfer completes. (See Figure 3.)

A03199

t₁: Determined by the RC circuit
t_c: 10 μs min.

A03200

Figure 3

Notes on Transferring Display Data from the Controller

Since the LC75842E takes the display data (D1 to D54) in two separate transfer operations as shown in Figure 2, we recommend that all the display data be transferred within 30 [ms] to maintain the quality of the displayed image.

Sample Display

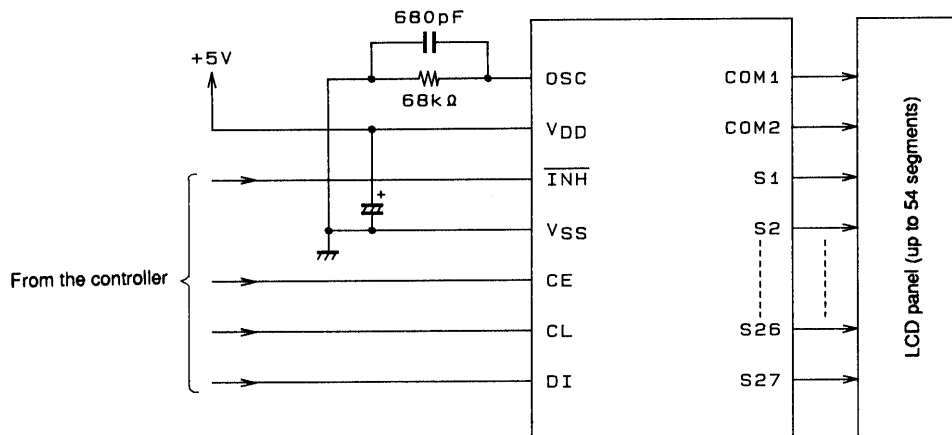

Note: The numbers in circles indicate the number of segments.
