# PRECISION 4.1 VOLT MICROPOWER VOLTAGE REFERENCE

ZR4040-4.1

**ISSUE 3 - FEBRUARY 1998** 

#### **DEVICE DESCRIPTION**

The ZR4040-4.1 uses a bandgap circuit design to achieve a precision micropower voltage reference of 4.1 volts. The device is available in small outline surface mount packages, ideal for applications where space saving is important, as well as packages for through hole requirements.

The ZR4040-4.1 design provides a stable voltage without an external capacitor and is stable with capacitive loads. The ZR4040-4.1 is recommended for operation between 60µA and 15mA and so is ideally suited to low power and battery powered applications.

Excellent performance is maintained to an absolute maximum of 25mA, however the rugged design and 20 volt processing allows the reference to withstand transient effects and currents up to 200mA. Superior switching capability allows the device to reach stable operating conditions in only a few microseconds.

#### **FEATURES**

- Small outline SO8 and SOT23 packages
- TO92 style package
- No stabilising capacitor required
- Typical T<sub>C</sub> 20ppm/°C
- Typical slope resistance  $0.55\Omega$
- 2% and 1% tolerance
- Industrial temperature range
- Operating current 60μA to 15mA

#### **APPLICATIONS**

- Battery powered and portable equipment.
- Metering and measurement systems.
- Instrumentation.
- · Test equipment.
- Data acquisition systems.
- Precision power supplies.
- Crystal oscillators.

### **ABSOLUTE MAXIMUM RATING**

Reverse Current 25mA
Forward Current 25mA
Operating Temperature -40 to 85°C
Storage Temperature -55 to 125°C

 Power Dissipation (T<sub>amb</sub>=25°C)

 SOT23
 330mW

 SO8
 625mW

 E-Line, 3 pin (TO92)
 500mW

## **ELECTRICAL CHARACTERISTICS**

TEST CONDITIONS (Unless otherwise stated) Tamb= 25°C
