

**1N2804 thru  
1N2846B  
and  
1N4557B thru  
1N4564B**

**FEATURES**

- ZENER VOLTAGE 3.9V to 200V
- AVAILABLE IN TOLERANCES OF  $\pm 5\%$ ,  $\pm 10\%$  and  $\pm 20\%$
- DESIGNED FOR MILITARY ENVIRONMENTS (See Below)

**MAXIMUM RATINGS**

Junction and Storage Temperatures:  $-65^{\circ}\text{C}$  to  $+175^{\circ}\text{C}$

DC Power Dissipation: 50 watts

Power Derating:  $0.5\text{W}/^{\circ}\text{C}$  above  $75^{\circ}\text{C}$

Forward Voltage @ 10 A: 1.5 Volts

**\* ELECTRICAL CHARACTERISTICS @  $25^{\circ}\text{C}$**

**MECHANICAL CHARACTERISTICS**

CASE: Industry Standard TO-3, (modified), hermetically sealed, 0.052 inch diameter pins.

FINISH: All external surfaces are corrosion resistant and terminal solderable.

THERMAL RESISTANCE:  $1.5^{\circ}\text{C}/\text{W}$  (Typical) junction to base.

POLARITY: Standard Polarity units are connected anode to case. Reverse polarity (cathode to case is indicated by a red dot on the base plate. (Suffix R)

WEIGHT: 15 grams.

MOUNTING HARDWARE: See page 2-9.

\*JEDEC Registered Data. \*\*Not JEDEC Data.

†Have JAN, JANTX and JANTXV Qualifications to MIL-S-19500/114.

## 1N2804 thru 1N2846B, 1N457B thru 1N4564B

**NOTE 1** The JEDEC type numbers shown (B suffix) have a  $\pm 5\%$  tolerance on nominal zener voltage. The suffix A is used to identify  $\pm 10\%$  tolerance; no suffix indicates  $\pm 20\%$  tolerance. If tighter tolerance is required, consult factory. Standard polarity units have the anode connected to the case. Reverse polarity (cathode-to-case) units are available and are indicated by suffixing an R to the part number.

**NOTE 2** Zener Voltage ( $V_Z$ ) is measured with junction in thermal equilibrium with  $30^\circ\text{C}$  base temperature. The test currents ( $I_{ZT}$ ) have been selected so that at nominal voltages the dissipation is a constant 12.5 watts. This results in a nominal junction temperature rise of  $18.75^\circ\text{C}$ .

**NOTE 3** The zener impedance is derived from the 60 cycle A.C. voltage, which results when an A.C. current having an R.M.S. value equal to 10% of the D.C. zener current ( $I_{ZT}$  or  $I_{ZK}$ ) is superimposed on  $I_{ZT}$  or  $I_{ZK}$ . Zener impedance is measured at 2 points to insure a sharp knee on the breakdown curve and to eliminate unstable units. A curve showing the variation of zener impedance vs. zener current for six representative types is shown in Figure 3. A 100% cathode ray tube curve trace test is used to insure that each zener diode breakdown region begins at a current lower than  $I_{ZK}$  and continues at nearly constant voltage to a current level in excess of  $I_{ZM}$ .

**NOTE 4** The values of  $I_{ZM}$  are calculated for a  $\pm 5\%$  tolerance on nominal zener voltage. Allowance has been made for the rise in zener voltage above  $V_{ZT}$  which results from zener impedance and the increase in junction temperature as power dissipation approaches 50 watts. In the case of individual diodes  $I_{ZM}$  is that value of current which results in a dissipation of 50 watts.
