Notes:

R_{BJA} is determined with the device mounted on a 1 in² 2 oz. copper pad on a 1.5 x 1.5 in. board of FR-4 material. The thermal resistance from the junction to
the circuit board side of the solder ball, R_{BJB}, is defined for reference. For R_{BJC}, the thermal reference point for the case is defined as the top surface of the
copper chip carrier. R_{BJC} and R_{BJB} are guaranteed by design while R_{BJA} is determined by the user's board design.
