

1. STUD TYPE THYRISTOR STACK

SINGLE-PHASE BRIDGE WITH 2 THYRISTORS ON LINE COMMON AC

SFR300L4BB1, SFR300U4BB2

The SFR300L4BB1 and SFR300U4BB2 series are thyristor stacks with two thyristors and two rectifier. They can be simply composed for single-phase control if a gate circuit is connected.

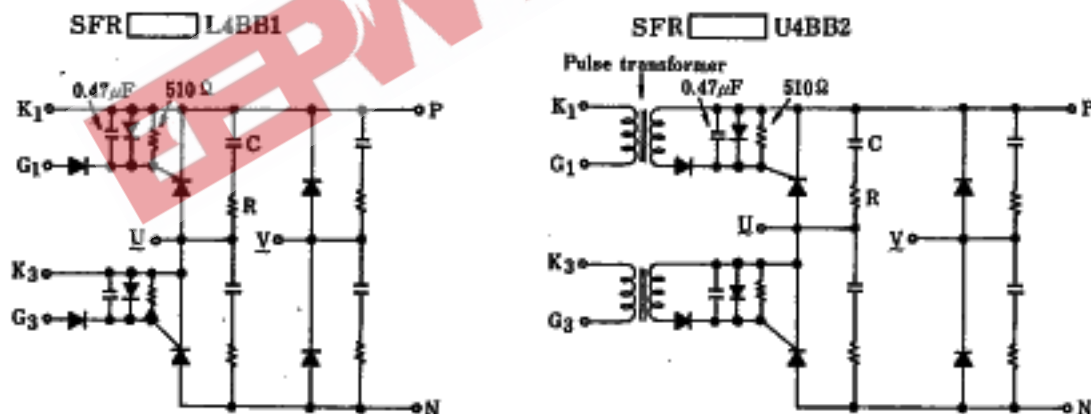

Current capacities for lines on a 220-V/440-V input voltage are available.

They are most suitable for thyristor-inverter power supply, DC motor-drive converter, DC constant-voltage and constant-current control.

MAXIMUM RATING

Type	Line Voltage V_{rms} (Vrms)	Repetitive Peak Off-State Voltage and Reverse Voltage V_{DRM}, V_{RRM} (V)	Output Current I_0 (A) $T_a = 60^\circ C$		Peak One-Cycle Surge Current (Non-Repetitive) I_{TSM} (A)	
			Free Convection	Air Velocity 5m/s	1 Cycle	10 Cycle
