

## 2.85 TO 12 VOLT FIXED POSITIVE LOCAL VOLTAGE REGULATOR

ISSUE 5 - JUNE 2006

## ZR78L SERIES

### DEVICE DESCRIPTION

The ZR78L Series three terminal fixed positive voltage regulators feature internal circuit current limit and thermal shutdown making the devices difficult to destroy. The circuit design allows creation of any custom voltage in the range 2.85 to 12 volts. The devices are available in a small outline surface mount package, ideal for applications where space saving is important, as well as through hole TO92 style packaging. The devices are suited to local voltage regulation applications, where problems could be encountered with distributed single source regulation, as well as more general voltage regulation applications.

The ZR78L Series show performance characteristics superior to other local voltage regulators. The initial output voltage is maintained to within 2.5% with a quiescent current of typically 350 $\mu$ A. Output voltage change, with input voltage and load current, is much lower than competitive devices. The ZR78L devices are completely stable with no external components. The device will shut down under thermal overload conditions but as the device cools, regulation will restart.

### FEATURES

- 2.85 to 12 Volt
- Output current up to 200mA
- Tight initial tolerance
- Low quiescent current
- -55 to 125°C temperature range
- No external components
- Internal thermal shutdown
- Internal short circuit current limit

Device	Output voltage	Package options		
		TO92(C)	SOT223(G)	SO8(N8)

N/A - never available

The ZSRxxx family of linear regulators are alternatives to the ZR78L family

# ZR78L SERIES

## ABSOLUTE MAXIMUM RATING

Input voltage	20V
Output Current(I <sub>o</sub> )	200mA
Operating Temperature	-55 to 125°C
Storage Temperature	-65 to 150°C

<b>Power Dissipation (T<sub>amb</sub>=25°C)</b>	
SOT223	2W(Note 3)
TO92	600mW
S08	780mW(Note 3)

## ELECTRICAL CHARACTERISTICS:

### Notes:

1. The maximum operating input voltage and output current of the device will be governed by the maximum power dissipation of the selected package. Maximum package power dissipation is specified at 25 °C and must be linearly derated to zero at T<sub>amb</sub>=125°C.
2. The following data represents pulse test conditions with junction temperatures as indicated at the initiation of the test. Continuous operation of the devices with the stated conditions might exceed the power dissipation limits of the chosen package.

3. Maximum power dissipation, for the SOT223 and SO8 packages, is calculated assuming that the device is mounted on a PCB measuring 2 inches square.

4. The shut down feature of the device operates if its temperature exceeds its design limit as might occur during external faults, short circuits etc. If the regulator is supplied from an inductive source then a large voltage transient, on the regulator input, can result should the shut down circuit operate. It is advised that a capacitor (1μF or greater) should be applied across the regulator input to ensure that the maximum voltage rating of the device is not exceeded under shutdown conditions.

## ZR78L028 TEST CONDITIONS (Unless otherwise stated):T<sub>j</sub>=25°C, I<sub>O</sub>=100mA, V<sub>in</sub>=6.85V
