

FEATURES

- Output Voltage Range Adjustable From 1.25 V to 37 V
- Output Current Greater Than 500 mA
- Internal Short-Circuit Current Limiting
- Thermal-Overload Protection
- Output Safe-Area Compensation
- Q Devices Meet Automotive Performance Requirements
- Customer-Specific Configuration Control Can Be Supported for Q Devices Along With Major-Change Approval

DESCRIPTION/ORDERING INFORMATION

The LM317M is an adjustable 3-terminal positive-voltage regulator capable of supplying more than 500 mA over an output-voltage range of 1.25 V to 37 V. The LM317M is exceptionally easy to use and requires only two external resistors to set the output voltage. Furthermore, both line and load regulation are better than standard fixed regulators.

In addition to having higher performance than fixed regulators, the device includes on-chip current limiting, thermal-overload protection, and safe-operating-area protection. All overload protection remains fully functional if the ADJUST terminal is disconnected.

Normally, no capacitors are needed unless the device is more than six inches from the input filter capacitors, in which case an input bypass capacitor is needed. An optional output capacitor can be added to improve transient response. The ADJUST terminal can be bypassed to achieve high ripple-rejection ratios, which are difficult to achieve with standard three-terminal regulators.

ORDERING INFORMATION

T_J	PACKAGE ⁽¹⁾		ORDERABLE PART NUMBER	TOP-SIDE MARKING
0°C to 125°C	PowerFLEX™ – KTP	Reel of 2000	LM317MKTTPR	LM317M
	SOT – DCY	Tube of 80	LM317MDCY	L4
		Reel of 2500	LM317MDCYR	
	TO-252 – KVU	Reel of 2500	LM317MKVURG3	LM317M
–40°C to 125°C	PowerFLEX – KTP	Reel of 2000	LM317MQKTTPR	317MQ
	SOT – DCY	Reel of 2500	LM317MQDCYR	L5
			LM317MQDCYRG3	L8

LM317M

3-TERMINAL ADJUSTABLE REGULATOR

SLVS2970 – APRIL 2000 – REVISED JULY 2006

Absolute Maximum Ratings⁽¹⁾

over operating temperature range (unless otherwise noted)

		MIN	MAX	UNIT
$V_I - V_O$	Input-to-output differential voltage		40	V
T_J	Operating virtual junction temperature		150	°C
	Lead temperature (within 5 mils of the plastic body for 10 s)		260	°C
			KTP, DCY packages	
T_{stg}	Storage temperature range	-65	150	°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

Package Thermal Data⁽¹⁾

PACKAGE	BOARD	θ_{JC}	θ_{JCB}	θ_{JA}
PowerFLEX (KTP)	High K, JESD 51-5		3°C/W	28°C/W
SOT-223 (DCY)	High K, JESD 51-7	30.6°C/W		53°C/W
TO-252 (KVU)	High K, JESD 51-5			30.3°C/W

(1) Maximum power dissipation is a function of $T_J(\max)$, θ_{JA} , and T_A . The maximum allowable power dissipation at any allowable ambient temperature is $P_D = (T_J(\max) - T_A)/\theta_{JA}$. Operating at the absolute maximum T_J of 150°C can affect reliability.

Recommended Operating Conditions

		MIN	MAX	UNIT
$V_I - V_O$	Input-to-output voltage differential		37	V
I_O	Output current		0.5	A
T_J	Operating virtual junction temperature	No suffix	0	125
		Q suffix	-40	125
				°C

Electrical Characteristics

over recommended operating virtual-junction temperature range, $V_I - V_O = 5$ V, $I_O = 0.1$ A (unless otherwise noted)

PARAMETER	TEST CONDITIONS ⁽¹⁾		MIN	TYP	MAX	UNIT
Line regulation ⁽²⁾	$V_I - V_O = 3$ V to 40 V	$T_J = 25^\circ\text{C}$		0.01	0.04	%V
		Full temperature range		0.02	0.07	
Load regulation	$I_O = 10$ mA to 500 mA	$T_J = 25^\circ\text{C}$		0.1	0.5	%V _O
		Full temperature range		0.3	1.5	
ADJUST terminal current				50	100	μA
Change in ADJUST terminal current	$V_I - V_O = 3$ V to 40 V,	$I_O = 10$ mA to 500 mA		0.2	5	μA
Reference voltage	$V_I - V_O = 3$ V to 40 V,	$I_O = 10$ mA to 500 mA	1.2	1.25	1.3	V
Output-voltage temperature stability				0.7		%
Minimum load current to maintain regulation				3.5	10	mA
Maximum output current	$V_I - V_O \leq 15$ V		500	900		mA
	$V_I - V_O = 40$ V, $P_D \leq P_{D(\max)}$,	$T_J = 25^\circ\text{C}$	150	250		
RMS output noise voltage (% of V _O)	$f = 10$ Hz to 10 kHz,	$T_J = 25^\circ\text{C}$		0.003		%V _O
Ripple rejection	$V_O = 10$ V, $f = 120$ Hz, $T_J = 25^\circ\text{C}$	$C_{ADJ} = 0^{(3)}$		65		dB
		$C_{ADJ} = 10$ μF ⁽³⁾	66	80		
Long-term stability	$T_J = 25^\circ\text{C}$			0.3	1	%/1k hrs

- (1) Pulse-testing techniques are used to maintain the junction temperature as close to the ambient temperature as possible.
 (2) Line voltage regulation is expressed here as the percentage change in output voltage per 1-V change at the input.
 (3) CADJ is connected between the ADJUST terminal and ground.

APPLICATION INFORMATION

- NOTES: A. C_i is not required, but is recommended, particularly if the regulator is not in close proximity to the power-supply filter capacitors. A 0.1- μF disc or 1- μF tantalum provides sufficient bypassing for most applications, especially when adjustment and output capacitors are used.
- B. C_o improves transient response, but is not needed for stability.
- C. V_o is calculated as shown:

$$V_o = V_{ref} \left(1 + \frac{R_2}{R_1} \right) + (I_{Adj} \times R_2)$$

Because I_{Adj} typically is 50 μA , it is negligible in most applications.

- D. C_{ADJ} is used to improve ripple rejection; it prevents amplification of the ripple as the output voltage is adjusted higher. If C_{ADJ} is used, it is best to include protection diodes.
- E. If the input is shorted to ground during a fault condition, protection diodes provide measures to prevent the possibility of external capacitors discharging through low-impedance paths in the IC. By providing low-impedance discharge paths for C_o and C_{ADJ} , respectively, D1 and D2 prevent the capacitors from discharging into the output of the regulator.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
