### 74ALVC2245

### Low Voltage Bidirectional Transceiver with 3.6V Tolerant Inputs and Outputs and 26 $\Omega$ Series Resistors in B Outputs

#### **General Description**

The ALVC2245 contains eight non-inverting bidirectional buffers with 3-STATE outputs and is intended for bus oriented applications. The  $T/\overline{R}$  input determines the direction of data flow. The OE input disables both the A and B ports by placing them in a high impedance state.

The 74ALVC2245 is designed for low voltage (1.65V to 3.6V)  $V_{CC}$  applications with I/O compatibility up to 3.6V. The ALVC2245 is also designed with 26  $\!\Omega$  series resistance in the B Port outputs. This design reduces line noise in applications such as memory address drivers, clock drivers, and bus transceivers transmitters

The 74ALVC2245 is fabricated with an advanced CMOS technology to achieve high-speed operation while maintaining low CMOS power dissipation.

#### **Features**

- $\blacksquare$  1.65V to 3.6V  $\rm V_{CC}$  supply operation
- 3.6V tolerant inputs and outputs
- 26 $\Omega$  series resistors in B Port outputs
- Power-off high impedance inputs and outputs
- Supports Live Insertion and Withdrawal (Note 1)
- t<sub>PD</sub> (A to B)

4.9 ns max for 3.0V to 3.6V V<sub>CC</sub>

6.1 ns max for 2.3V to 2.7V V<sub>CC</sub>

9.8 ns max for 1.65V to 1.95V V<sub>CC</sub>

- Uses patented Quiet Series™ noise/EMI reduction circuitry
- Latchup conforms to JEDEC JED78
- ESD performance:

Human body model > 2000V

Machine model > 200V

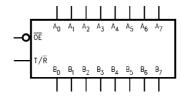

Note 1: To ensure the high impedance state during power up and power down,  $\overline{\text{OE}}_n$  should be tied to  $V_{CC}$  through a pull up resistor. The minimum value of the resistor is determined by the current sourcing capability of the

### **Ordering Code:**

| Order Number      | Package Number | Package Description   |
|-------------------|----------------|---|
| 74ALVC2245WM M20B |                | 20-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-013, 0.300" Wide  |
| 74ALVC2245MTC     | MTC20          | 20-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 4.4mm Wide |

Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

### **Logic Symbol**

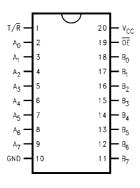

#### **Pin Descriptions**

| Pin Names                      | Description                      |
|--------------------------------|----------------------------------|
| ŌE                             | Output Enable Input (Active LOW) |
| T/R                            | Transmit/Receive Input           |
| A <sub>0</sub> -A <sub>7</sub> | Side A Inputs or 3-STATE Outputs |
| B <sub>0</sub> –B <sub>7</sub> | Side B Inputs or 3-STATE Outputs |

# Recommended Operating Conditions (Note 5)

Power Supply

Operating 1.65V to 3.6V Input Voltage 0V to  $V_{CC}$  Output Voltage ( $V_{O}$ ) 0V to  $V_{CC}$ 

Free Air Operating Temperature (T<sub>A</sub>) -40°C to +85°C

Minimum Input Edge Rate (Δt/ΔV)

 $V_{IN} = 0.8V$  to 2.0V,  $V_{CC} = 3.0V$  10 ns/V

Note 3: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 4: I<sub>O</sub> Absolute Maximum Rating must be observed.

Note 5: Floating or unused control inputs must be held HIGH or LOW.
