74VCX16500 Low Voltage 18-Bit Universal Bus Transceivers with 3.6V Tolerant Inputs and Outputs

General Description

The VCX16500 is an 18-bit universal bus transceiver which combines D-type latches and D-type flip-flops to allow data flow in transparent, latched, and clocked modes.

Data flow in each direction is controlled by output-enable (OEAB and OEBA), latch-enable (LEAB and LEBA), and clock (CLKAB and CLKBA) inputs. For A-to-B data flow, the device operates in the transparent mode when LEAB is HIGH. When LEAB is LOW, the A data is latched if CLKAB is held at a HIGH or LOW logic level. If LEAB is LOW, the A bus data is stored in the latch/flip-flop on the HIGH-to-LOW transition of CLKAB. When OEAB is HIGH, the outputs are in a high-impedance state.

 $\frac{Data flow for B to A is similar to that of A to B but uses \\ \hline OEBA, LEBA, and CLKBA. The output enables are complementary (OEAB is active HIGH and <math>\overline{OEBA}$ is active LOW).

The VCX16500 is designed for low voltage (1.4V to 3.6V) V_{CC} applications with I/O capability up to 3.6V.

The 74VCX16500 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining low CMOS power dissipation.

Features

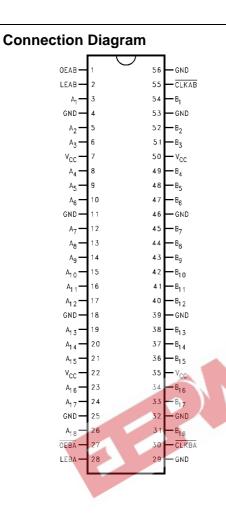

- 1.4V to 3.6V V_{CC} supply operation
- 3.6V tolerant inputs and outputs
- t_{PD} (A to B, B to A)
- 2.9 ns max for 3.0V to 3.6V V_{CC}
- Power-down high impedance inputs and outputs
- Supports live insertion/withdrawal (Note 1)
- Static Drive (I_{OH}/I_{OL}) ±24 mA @ 3.0V V_{CC}
- Uses patented noise/EMI reduction circuitry
- Latchup performance exceeds 300 mA
- ESD performance: Human body model > 2000V Machine model >200V

Note 1: To ensure the high-impedance state during power up or power down, \overrightarrow{OEBA} should be tied to V_{CC} through a pull-up resistor and OEAB should be tied to GND through a pull-down resistors; the minimum value of the resistor is determined by the current-sourcinc capability of the driver.

Ordering Code:

Order Number	Package Number	Package Description
74VCX16500MTD	MTD56	56-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide
Devices also available	on Tape and Reel. Specify	v by appending the suffix letter "X" to the ordering code.

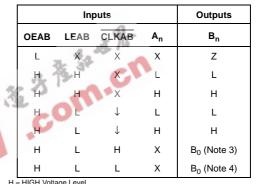

74VCX16500

Pin Descriptions

Pin Names	Description
OEAB	Output Enable Input for A to B Direction (Active HIGH)
OEBA	Output Enable Input for B to A Direction (Active LOW)
LEAB, LEBA	Latch Enable Inputs
<u>CLKAB,</u> CLKBA	Clock Inputs
A ₁ -A ₁₈	Side A Inputs or 3-STATE Outputs
B ₁ –B ₁₈	Side B Inputs or 3-STATE Outputs

Function Table (Note 2)

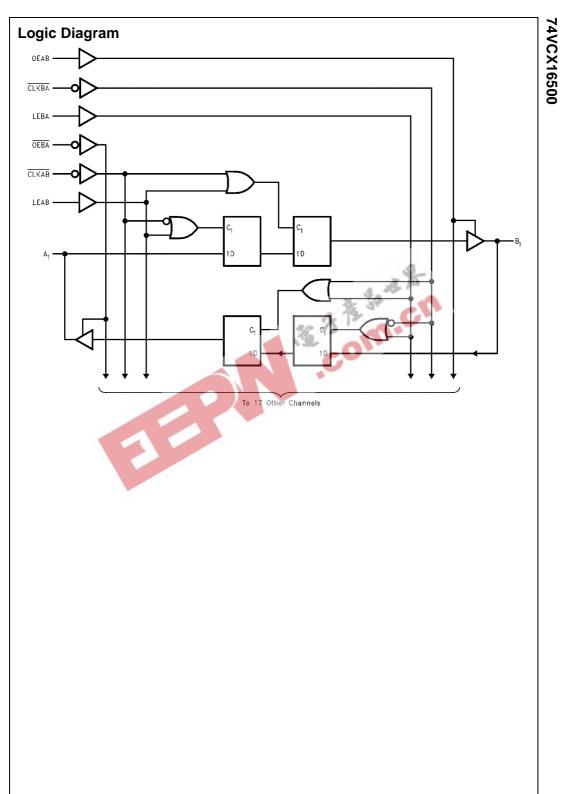

H = HIGH Voltage Level L = LOW Voltage Level

 $\begin{array}{l} X = \text{Immaterial} \mbox{ (HIGH or LOW, inputs may not float)} \\ Z = \text{High Impedance} \end{array}$

Note 2: A-to-B data flow is shown; B-to-A flow is similar but uses $\overline{\text{OEBA}}$, LEBA and $\overline{\text{CLKBA}}$. $\overline{\text{OEBA}}$ is active LOW.

Note 3: Output level before the indicated steady-state input conditions were established.

Note 4: Output level before the indicated steady-state input conditions were established, provided that CLKAB was LOW before LEAB went LOW.

Absolute Maximum Ratings(Note 5)

Supply Voltage (V_{CC})

-0.5V to +4.6V

Recommended Operating Conditions (Note 7)

DC Input Voltage (VI)	-0.5V to +4.6V
Output Voltage (V _O)	
Outputs 3-STATED	-0.5V to +4.6V
Outputs Active (Note 6)	–0.5 to V_{CC} + 0.5V
DC Input Diode Current (I _{IK}) $V_I < 0V$	–50 mA
DC Output Diode Current (I _{OK})	
V _O < 0V	–50 mA
$V_{O} > V_{CC}$	+50 mA
DC Output Source/Sink Current	
(I _{OH} /I _{OL})	±50 mA
DC V_{CC} or Ground Current per	
Supply Pin (I _{CC} or Ground)	±100 mA
Storage Temperature Range (T_{STG})	$-65^{\circ}C$ to $+150^{\circ}C$

Power Supply	
Operating	1.4V to 3.6V
Input Voltage	-0.3V to 3.6V
Output Voltage (V _O)	
Output in Active States	0V to V_{CC}
Output in 3-STATE	0.0V to 3.6V
Output Current in I _{OH} /I _{OL}	
$V_{CC} = 3.0V$ to 3.6V	±24 mA
$V_{CC} = 2.3V$ to 2.7V	±18 mA
$V_{CC} = 1.65V$ to 2.3V	±6 mA
$V_{CC} = 1.4V$ to 1.6V	±2 mA
Free Air Operating Temperature (T _A)	$-40^{\circ}C$ to $+85^{\circ}C$
Minimum Input Edge Rate ($\Delta t/\Delta V$)	
$V_{IN} = 0.8V$ to 2.0V, $V_{CC} = 3.0V$	10 ns/V

 $\label{eq:VN} V_{\text{IN}} = 0.8V \ \text{IO} \ 2.0V, \ V_{\text{CC}} = 3.0V \qquad \text{IO} \ \text{INS/V}$ Note 5: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The Recommended Operating Conditions tables will define the conditions for actual device operation. Note 6: I_O Absolute Maximum Rating must be observed. Note 7: Floating or unused pin (inputs or I/O's) must be held HIGH or LOW.
