SCBS103B - FEBRUARY 1992 - REVISED JANUARY 1997

- Members of the Texas Instruments Widebus™ Family
- State-of-the-Art EPIC-IIB™ BiCMOS Design Significantly Reduces Power Dissipation
- Latch-Up Performance Exceeds 500 mA Per JEDEC Standard JESD-17
- Typical V<sub>OLP</sub> (Output Ground Bounce) < 1 V at V<sub>CC</sub> = 5 V, T<sub>A</sub> = 25°C
- Distributed V<sub>CC</sub> and GND Pin Configuration Minimizes High-Speed Switching Noise
- Flow-Through Architecture Optimizes PCB Layout
- High-Drive Outputs (–32-mA I<sub>OH</sub>, 64-mA I<sub>OL</sub>)
- Package Options Include Plastic 300-mil Shrink Small-Outline (DL) and Thin Shrink Small-Outline (DGG) Packages and 380-mil Fine-Pitch Ceramic Flat (WD) Package Using 25-mil Center-to-Center Spacings

#### description

The 'ABT16657 contain two noninverting octal transceiver sections with separate parity generator/checker circuits and control signals. For either section, the transmit/receive ( $1T/\overline{R}$  or  $2T/\overline{R}$ ) input determines the direction of data flow. When  $1T/\overline{R}$  (or  $2T/\overline{R}$ ) is high, data flows from the 1A (or 2A) port to the 1B (or 2B) port (transmit mode); when  $1T/\overline{R}$  (or 2B) port to the 1A (or 2A) port (receive mode). When the output-enable ( $1\overline{OE}$  or  $2\overline{OE}$ ) input is high, both the 1A (or 2A) and 1B (or 2B) ports are in the high-impedance state.

NC - No internal connection

Odd or even parity is selected by a logic high or low level, respectively, on the 1ODD/EVEN (or 2ODD/EVEN) input. 1PARITY (or 2PARITY) carries the parity bit value; it is an output from the parity generator/checker in the transmit mode and an input to the parity generator/checker in the receive mode.

In the transmit mode, after the 1A (or 2A) bus is polled to determine the number of high bits, 1PARITY (or 2PARITY) is set to the logic level that maintains the parity sense selected by the level at the 1ODD/EVEN (or 2ODD/EVEN) input. For example, if 1ODD/EVEN is low (even parity selected) and there are five high bits on the 1A bus, then 1PARITY is set to the logic high level so that an even number of the nine total bits (eight 1A-bus bits plus parity bit) are high.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

SCBS103B - FEBRUARY 1992 - REVISED JANUARY 1997

## description (continued)

In the receive mode, after the 1B (or 2B) bus is polled to determine the number of high bits, the  $1\overline{\text{ERR}}$  (or  $2\overline{\text{ERR}}$ ) output logic level indicates whether or not the data to be received exhibits the correct parity sense. For example, if  $10DD/\overline{\text{EVEN}}$  is high (odd parity selected), 1PARITY is high, and there are three high bits on the 1B bus, then  $1\overline{\text{ERR}}$  is low, indicating a parity error.

To ensure the high-impedance state during power up or power down,  $\overline{OE}$  should be tied to  $V_{CC}$  through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

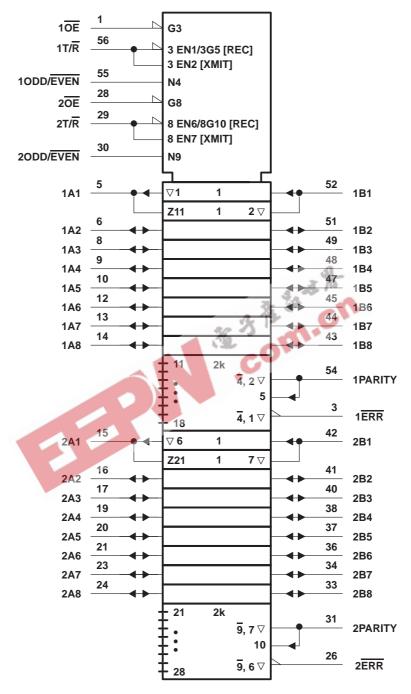

The SN54ABT16657 is characterized for operation over the full military temperature range of  $-55^{\circ}$ C to 125°C. The SN74ABT16657 is characterized for operation from  $-40^{\circ}$ C to 85°C.

SCBS103B - FEBRUARY 1992 - REVISED JANUARY 1997

### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

| Supply voltage range, V <sub>CC</sub>  |                |
|--|----------------|
| Input voltage range, V <sub>I</sub> (except I/O ports) (see Note 1)                            |                |
| Voltage range applied to any output in the high or power-off state, $V_{\mbox{\scriptsize O}}$ |                |
| Current into any output in the low state, I <sub>O</sub> : SN54ABT16657                        | 96 mA          |
| SN74ABT16657   | 128 mA         |
| Input clamp current, I <sub>IK</sub> (V <sub>I</sub> < 0)                                      | –18 mA         |
| Output clamp current, $I_{OK}$ ( $V_O < 0$ )   |                |
| Package thermal impedance, θ <sub>JA</sub> (see Note 2): DGG package                           | 81°C/W         |
| DL package   | 74°C/W         |
| Storage temperature range, T <sub>stg</sub>  | –65°C to 150°C |

<sup>†</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

2. The package thermal impedance is calculated in accordance with EIA/JEDEC Std JESD51.

#### recommended operating conditions (see Note 3)

| Ci                 | Control inputs           | V <sub>I</sub> = 2.5 V or 0.5 V                            |   |          | 3     |              |        |              |             |      | pF   |  |
| C <sub>io</sub>    | A or B ports             | $V_0 = 2.5 \text{ V or } 0.5 \text{ V}$                    |   |          | 9     |              |        |              |             |      | pF   |  |

<sup>\*</sup> On products compliant to MIL-PRF-38535, this parameter does not apply.

<sup>†</sup> All typical values are at  $V_{CC} = 5 \text{ V}$ .

<sup>&</sup>lt;sup>‡</sup> The parameters I<sub>OZH</sub> and I<sub>OZL</sub> include the input leakage current.

<sup>§</sup> Not more than one output should be tested at a time, and the duration of the test should not exceed one second.

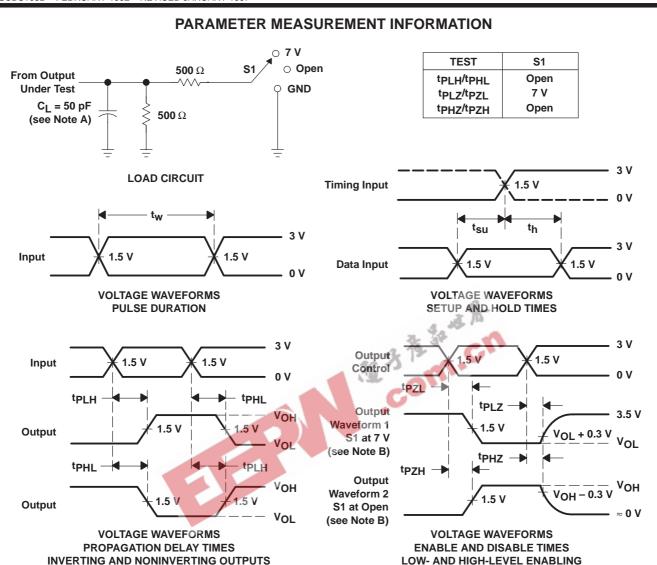

This is the increase in supply current for each input that is at the specified TTL voltage level rather than V<sub>CC</sub> or GND.

SCBS103B - FEBRUARY 1992 - REVISED JANUARY 1997

NOTES: A. C<sub>L</sub> includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10 MHz,  $Z_O = 50 \Omega$ ,  $t_f \leq 2.5 \text{ ns.}$   $t_f \leq 2.5 \text{ ns.}$
- D. The outputs are measured one at a time with one transition per measurement.

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

**Pb-Free** (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

#### **IMPORTANT NOTICE**

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
