

KA78TXX

3-Terminal 3A Positive Voltage Regulator

Features

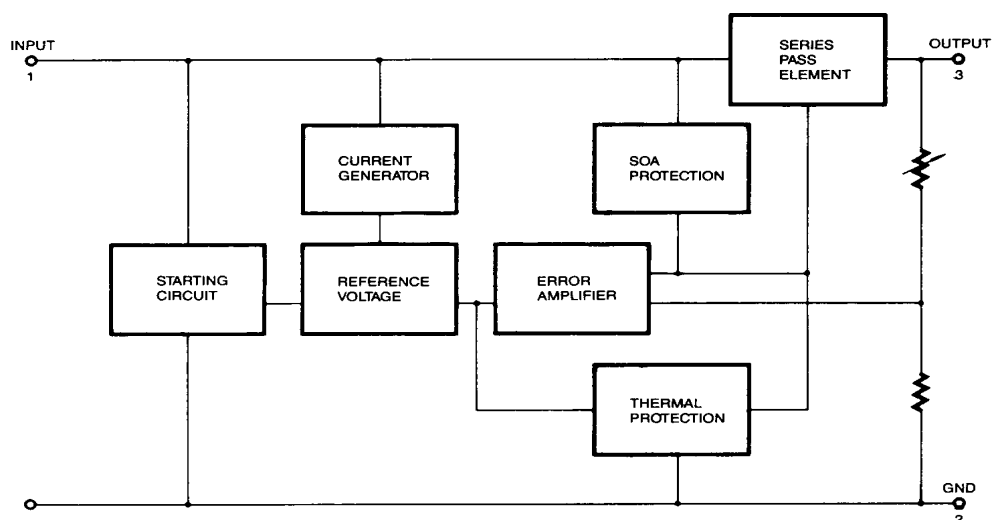

- Output current in excess of 3.0A
- Output transistor safe operating area compensation
- Power dissipation :25W
- Internal short circuit current limiting
- Internal thermal overload protection
- Output voltage offered in 4% tolerance
- No external components required
- Output voltage of 5, 12 and 15V

Description

This family of fixed voltage regulators are monolithic integrated circuit capable of driving loads in excess of 3.0 A.

Typical Application

**Notes:**

1. To specify an output voltage, substitute voltage value for "XX".
2. Bypass Capacitors are recommend for optimum stability and transient response and should be located as close as possible to the regulator
