Obsolete Device

TC1275/TC1276/TC1277

3-Pin Reset Monitors for 3.3V Systems

Features

- Precision V_{CC} Monitor for 3.3V Systems
- 100 ms Minimum $\overline{\text{RESET}}$, RESET Output Duration
- Output Valid to V_{CC} = 1.2V
- V_{CC} Transient Immunity
- Small 3-Pin SOT-23 Package
- No External Components

Applications

- Computers
- Embedded Systems
- Battery Powered Equipment
- Critical µP Power Supply Monitoring

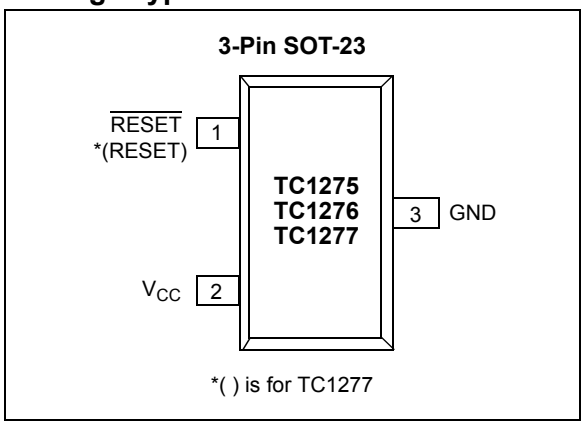
Device Selection Table

Part Number	Order	Package	Temp. Range
TC1275-xENB	Complimentary	3-Pin SOT-23	-40°C to +85°C
TC1276-xENB	Open-Drain	3-Pin SOT-23	-40°C to +85°C
TC1277-xENB	Complimentary	3-Pin SOT-23	-40°C to +85°C

NOTE: "x" denotes a suffix for V_{CC} threshold (see table below).

Suffix	Reset V_{CC} Threshold (V)
5	3.06
10	2.88
20	2.55

Package Type



General Description

The TC1275/TC1276/TC1277 are cost-effective system supervisor circuits designed to monitor V_{CC} in digital systems and provide a reset signal to the host processor when necessary. No external components are required.

The reset output is driven active within 20 µs of V_{CC} falling through the reset voltage threshold. RESET is maintained active for a minimum of 100 ms after V_{CC} rises above the reset threshold. The TC1277 has an active-high RESET output while the TC1275 and TC1276 have an active-low $\overline{\text{RESET}}$ output. TC1275 and TC1277 each have a complimentary output while the TC1276 has an open drain output. The output of the TC1275 and TC1276 is valid down to V_{CC} = 1.2V. The TC1277 is valid down to V_{CC} = 1.8V. All three devices are available in a 3-Pin SOT-23 package.

The TC1275/TC1276/TC1277 devices are optimized to reject fast transient glitches on the V_{CC} line.

Typical Operating Circuit

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings*

Supply Voltage (V_{CC} to GND) .....+6.0V
$\overline{RESET}$, RESET..... -0.3V to (V_{CC} + 0.3V)
Input Current, V_{CC}.....20 mA
Output Current, $\overline{RESET}$, RESET.....20 mA
Power Dissipation ($T_A \leq 70°C$)
3-Pin SOT-23 (derate 4 mW/°C above +70°C)
.....230 mW
Operating Temperature Range.....-40°C to +85°C
Storage Temperature Range .....-65°C to +150°C

*Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions above those indicated in the operation sections of the specifications is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

TC1275/TC1276/TC1277 ELECTRICAL SPECIFICATIONS

Recommended DC Operating Conditions: T_A = -40°C to +85°C unless otherwise noted. Typical values are at T_A = +25°C.

2.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in Table 2-1.

TABLE 2-1: PIN FUNCTION TABLE

Pin No. (3-Pin SOT-23)	Symbol	Description
1	$\overline{\text{RESET}}$ (TC1275/ TC1276)	$\overline{\text{RESET}}$ output remains low while V_{CC} is below the reset voltage threshold, and for 200 ms (100 ms minimum) after V_{CC} rises above reset threshold. The output stage of the TC1275 is complimentary. The output stage of the TC1276 is open-drain.
1	RESET (TC1277)	RESET output remains high while V_{CC} is below the reset voltage threshold, and for 200 ms (100 ms minimum) after V_{CC} rises above reset threshold. The output stage of the TC1277 is complimentary.
2	V_{CC}	Supply voltage (1.2V to 5.5V TC1275 and TC1276, 1.8V to 5.5V TC1277).
3	GND	Ground.

3.0 APPLICATIONS INFORMATION

3.1 Operation – Power Monitor

The TC1275/TC1276/TC1277 provide the function of detecting out-of-tolerance power supply conditions and warning a processor-based system of impending power failure. When V_{CC} is detected as out-of-tolerance, the RESET signal is asserted. On power-up, RESET is kept active for approximately 200 ms after the power supply has reached the selected tolerance. This allows the power supply and microprocessor to stabilize before RESET is released.

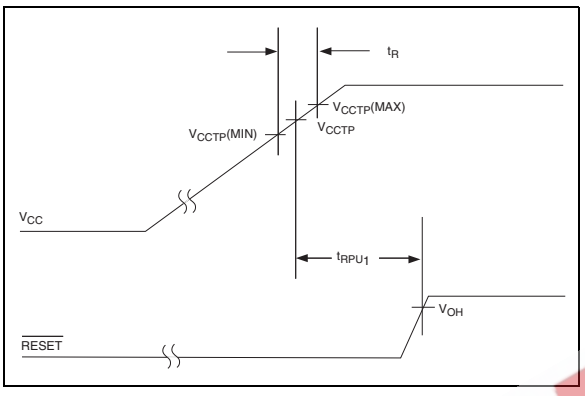

FIGURE 3-1: *Timing Diagram – Power Up (TC1275/TC1276).*

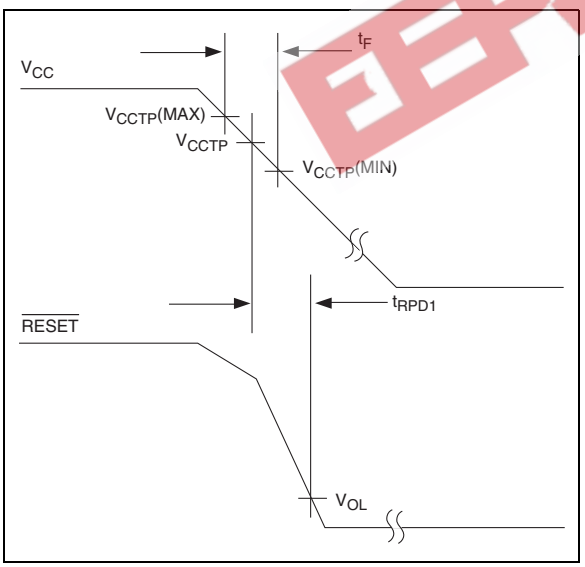

FIGURE 3-2: *Timing Diagram – Power Down (TC1275/TC1276).*

3.2 V_{CC} Transient Rejection

The TC1275/TC1276/TC1277 provides accurate V_{CC} monitoring and reset timing during power-up, power-down, and brownout/sag conditions, and rejects negative-going transients (glitches) on the power supply line. Figure 3-5 shows the maximum transient duration vs. maximum negative excursion (overdrive) for glitch rejection. Any combination of duration and overdrive that lays **under** the curve will **not** generate a reset signal. Combinations above the curve are detected as a brownout or power-down. Transient immunity can be improved by adding a capacitor in close proximity to the V_{CC} pin of the TC1275/TC1276/TC1277.

3.3 $\overline{\text{RESET}}$ Signal Integrity During Power-Down

The TC1275 $\overline{\text{RESET}}$ output is valid to V_{CC} = 1.2V. Below this voltage the output becomes an "open circuit" and does not sink current. This means CMOS logic inputs to the µP will be floating at an undetermined voltage. Most digital systems are completely shut down well above this voltage. However, in situations where $\overline{\text{RESET}}$ must be maintained valid to V_{CC} = 0V, a pull-down resistor must be connected from $\overline{\text{RESET}}$ to ground to discharge stray capacitances and hold the output low (Figure 3-6). This resistor value, though not critical, should be chosen such that it does not appreciably load $\overline{\text{RESET}}$ under normal operation (100 kΩ will be suitable for most applications). Similarly, a pull-up resistor to V_{CC} is required for the TC1277 to ensure a valid high $\overline{\text{RESET}}$ for V_{CC} below 1.8V.

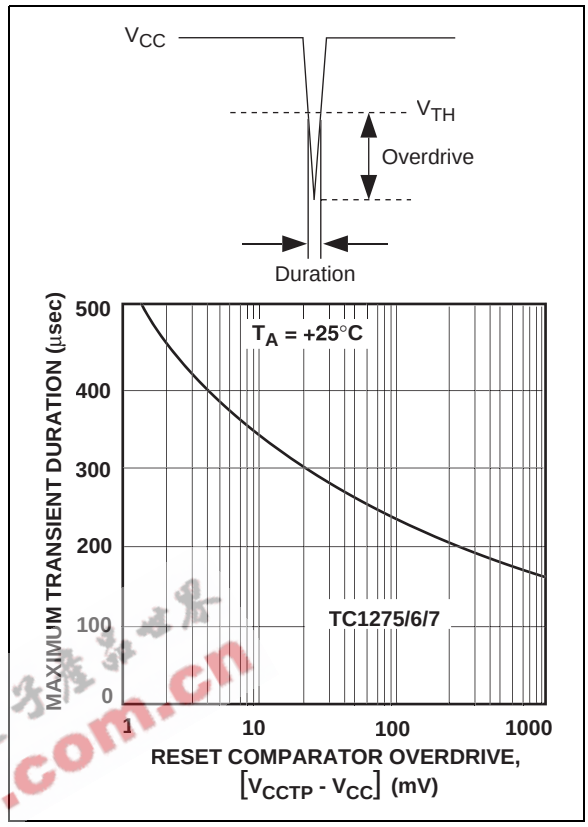

FIGURE 3-5: *Maximum Transient Duration Vs. Overdrive For Glitch Rejection At +25°C.*

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
ISO/TS 16949:2002

Microchip received ISO/TS-16949:2002 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona, Gresham, Oregon and Mountain View, California. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
