H = High-voltage level

h = High state must be present one setup time before the Low-to-High clock transition

L = Low-voltage level

I = Low state must be present one setup time before the Low-to-High clock transition

qn = Lower case letters indicate the state of the referenced output prior to the Low-to-High clock transition

X = Don't care

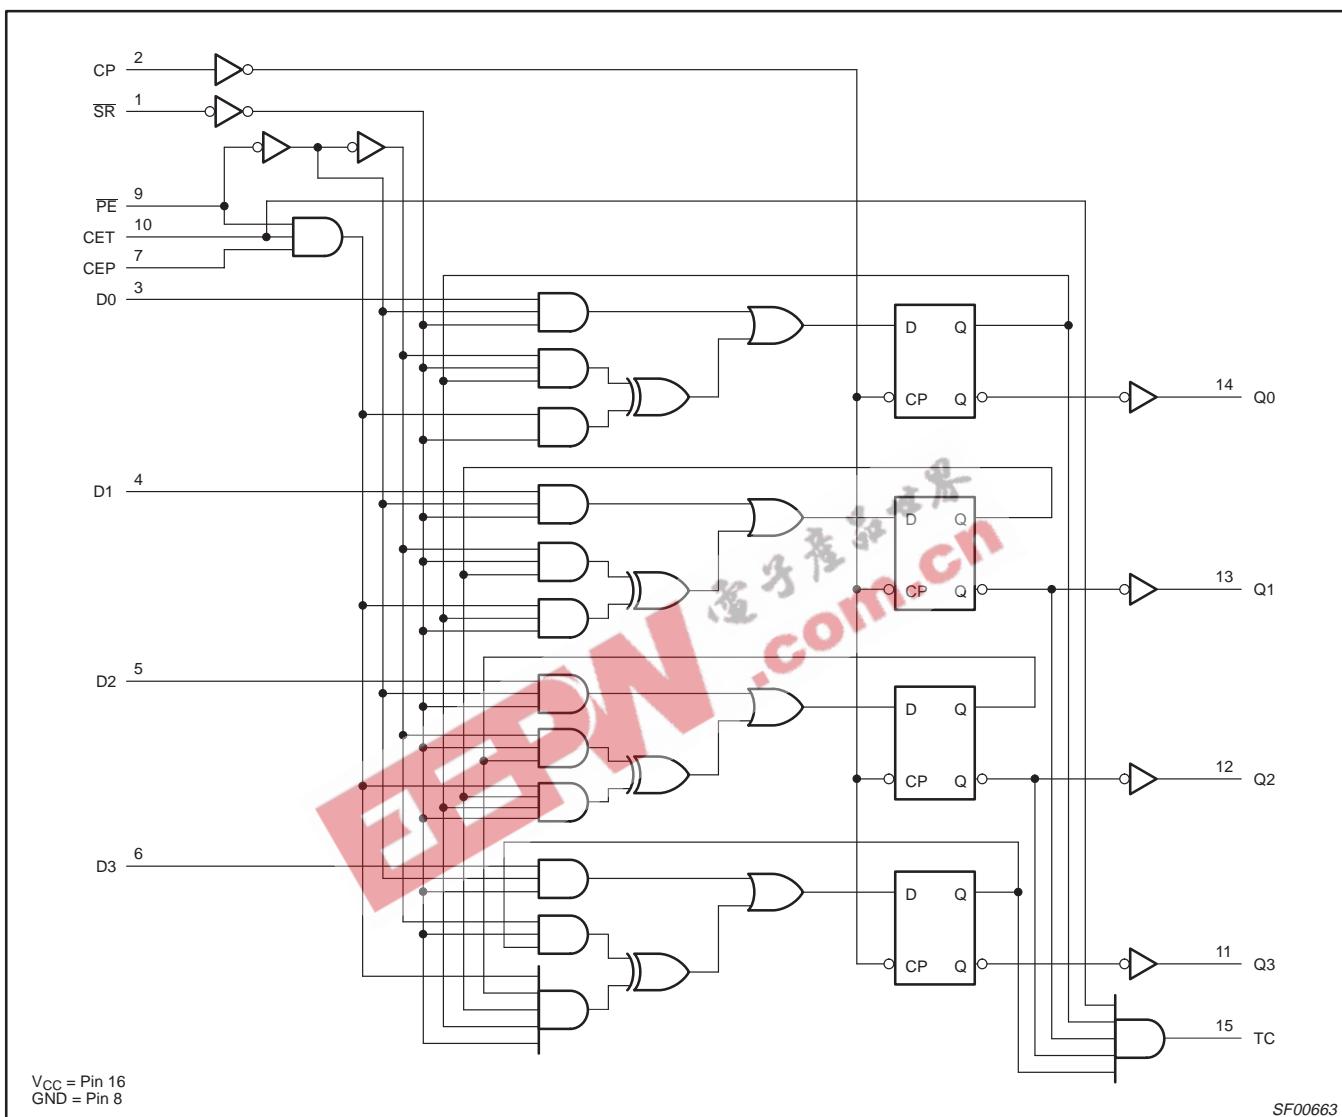

(a) = The output is High when CET is High and the counter is at terminal count (HHHH)

↑ = Low-to-High clock transition

## AC WAVEFORMS

For all waveforms,  $V_M = 1.3V$ .

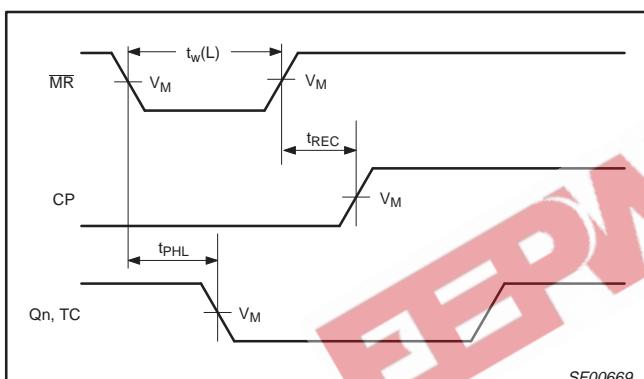

The shaded areas indicate when the input is permitted to change for predictable output performance.

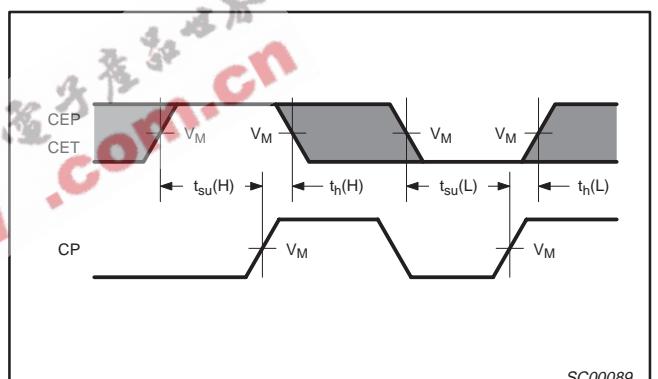

Waveform 1. Propagation Delay for Clock Input to Output, Clock Pulse Width, and Maximum Clock Frequency

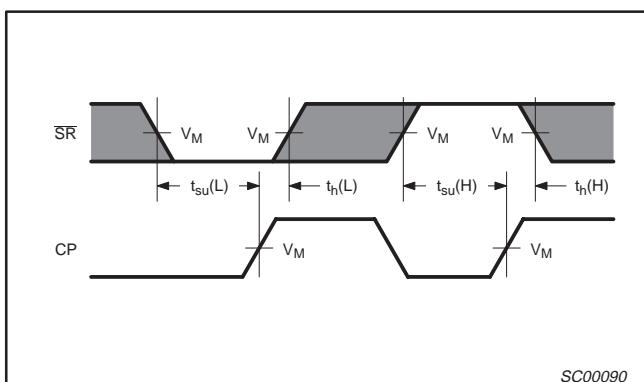

Waveform 2. Propagation Delay for CET to TC Output

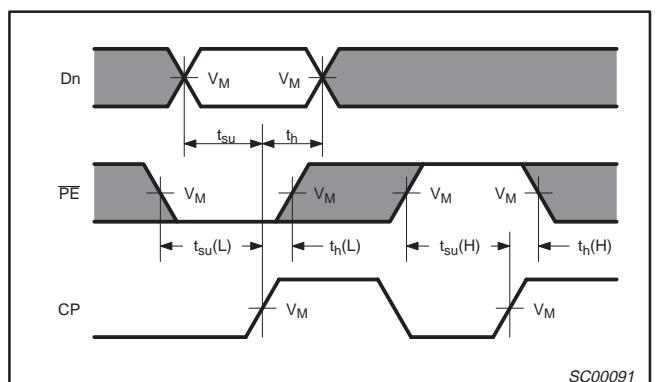

Waveform 3. Master Reset Pulse Width, Master Reset to Output Delay, and Master Reset to Clock Recovery Time

Waveform 4. CEP and CET Setup and Hold Times

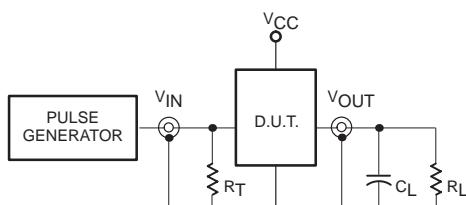

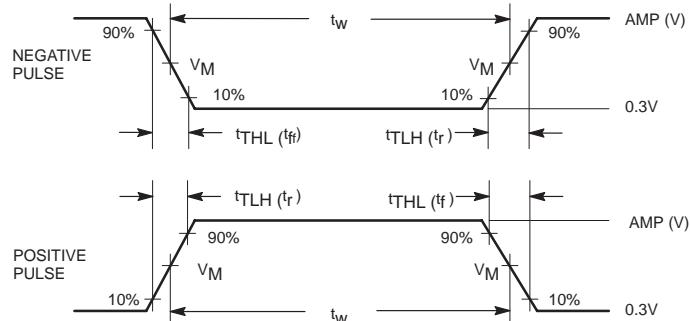

Waveform 5. Synchronous Reset Setup and Hold Times

Waveform 6. Data and Parallel Enable Setup and Hold Times
