4M x 16Bit x 4 Banks Mobile SDRAM in 54FBGA

FEATURES

- 3.0V & 3.3V power supply.
- LVCMOS compatible with multiplexed address.
- · Four banks operation.
- · MRS cycle with address key programs.
 - -. CAS latency (1, 2 & 3).
 - -. Burst length (1, 2, 4, 8 & Full page).
- -. Burst type (Sequential & Interleave).
- · EMRS cycle with address key programs.
- · All inputs are sampled at the positive going edge of the system clock
- · Burst read single-bit write operation.
- · Special Function Support.
 - -. PASR (Partial Array Self Refresh).
 - -. Internal TCSR (Temperature Compensated Self Refresh)
 - -. DS (Driver Strength)
- · DQM for masking.
- · Auto refresh.
- 64ms refresh period (8K cycle).
- Commercial Temperature Operation (-25°C ~ 70°C).
- Extended Temperature Operation (-25°C ~ 85°C).
- 54Balls FBGA (-RXXX -Pb, -BXXX -Pb Free).

GENERAL DESCRIPTION

The K4M561633G is 268,435,456 bits synchronous high data rate Dynamic RAM organized as 4 x 4,196,304 words by 16 bits, fabricated with SAMSUNG's high performance CMOS technology. Synchronous design allows precise cycle control with the use of system clock and I/O transactions are possible on every clock cycle. Range of operating frequencies, programmable burst length and programmable latencies allow the same device to be useful for a variety of high bandwidth, high performance memory system applications.

ORDERING INFORMATION

| DQM for masking. Auto refresh. 64ms refresh period (8K cycle). Commercial Temperature Operation (-25°C ~ Extended Temperature Operation (-25°C ~ 85 54Balls FBGA (-RXXX -Pb, -BXXX -Pb Free ORDERING INFORMATION | 70°C). ;°C). e). | Se St. | |
|--|----------------------------|-----------|-------------------------|
| Part No. | Max Freq. | Interface | Package |
| K4M561633G-R(B)N/G/L/F75 | 133MHz(CL3), 111MHz(CL2) | | |
| K4M561633G-R(B)N/G/L/F1H | 111MHz(CL2) | LVCMOS | 54 FBGA Pb (Pb Free) |
| K4M561633G-R(B)N/G/L/F1L | 111MHz(CL=3)*1, 83MHz(CL2) | | · · · / |

- R(B)N/G : Low Power, Extended Temperature(-25°C ~ 85°C)

- R(B)L/F : Low Power, Commercial Temperature(-25°C ~ 70°C)

NOTES :

1. In case of 40MHz Frequency, CL1 can be supported.

Address configuration

| Organization | Bank | Row | Column Address |
|--------------|---------|----------|----------------|

Samsung products are not intended for use in life support, critical care, medical, safety equipment, or similar applications where Product failure could result in loss of life or personal or physical harm, or any military or defense application, or any governmental procurement to which special terms or provisions may apply.

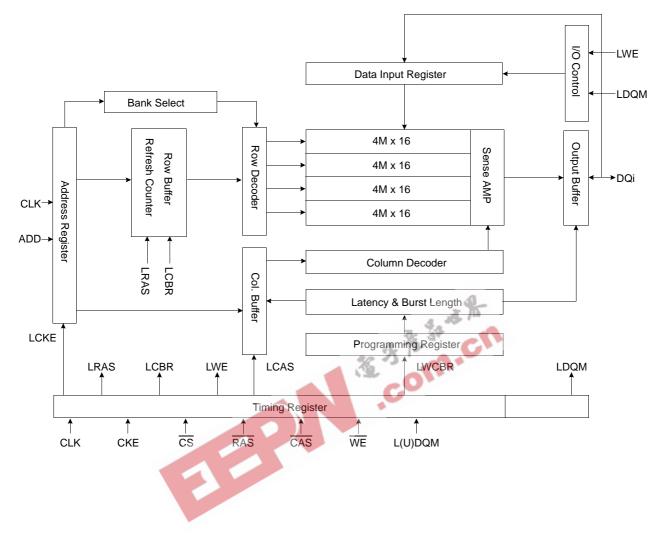

January 2006

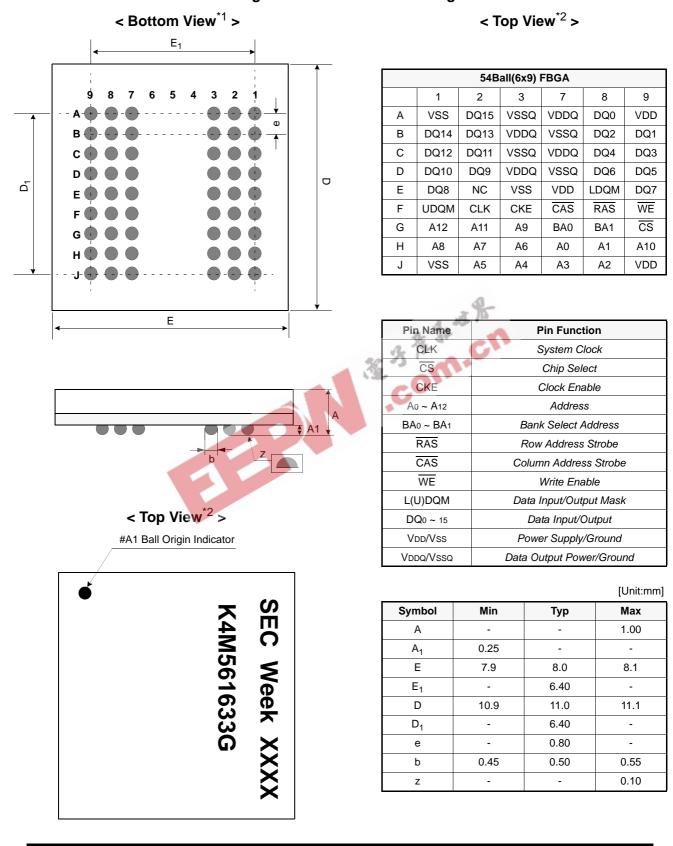

K4M561633G - R(B)N/G/L/F

Mobile SDRAM

FUNCTIONAL BLOCK DIAGRAM

Package Dimension and Pin Configuration

SAMSUNG

ABSOLUTE MAXIMUM RATINGS

| Parameter | Symbol | Value | Unit |
|---------------------------------------|-----------|------------|------|
| Voltage on any pin relative to Vss | Vin, Vout | -1.0 ~ 4.6 | V |
| Voltage on VDD supply relative to Vss | Vdd, Vddq | -1.0 ~ 4.6 | V |
| Storage temperature | Тѕтс | -55 ~ +150 | °C |
| Power dissipation | Po | 1.0 | W |
| Short circuit current | los | 50 | mA |

NOTES:

Permanent device damage may occur if ABSOLUTE MAXIMUM RATINGS are exceeded.

Functional operation should be restricted to recommended operating condition.

Exposure to higher than recommended voltage for extended periods of time could affect device reliability.

DC OPERATING CONDITIONS

Recommended operating conditions (Voltage referenced to Vss = 0V, TA = -25 ~ 85°C for Extended, -25 ~ 70°C for Commercial)

| Parameter | Symbol | Min | Тур | Max | Unit | Note |
|---------------------------|--------|------|-----|------------|------|------------|
| Supply voltage | Vdd | 2.7 | 3.0 | 3.6 | V | 1 |
| Supply voltage | Vddq | 2.7 | 3.0 | 3.6 | V | 1 |
| Input logic high voltage | Vін | 2.2 | 3.0 | Vddq + 0.3 | V | 2 |
| Input logic low voltage | VIL | -0.3 | 0 | 0.5 | V | 3 |
| Output logic high voltage | Vон | 2.4 | 19 | on. | V | Іон = -2mA |
| Output logic low voltage | Vol | | - 6 | 0.4 | V | IOL = 2mA |
| Input leakage current | lu | -10 | • | 10 | uA | 4 |

NOTES :

1. Under all conditions VDDQ must be less than or equal to VDD.

2. VIH (max) = 5.3V AC. The overshoot voltage duration is \leq 3ns. 3. VIL (min) = -2.0V AC. The undershoot voltage duration is \leq 3ns.

4. Any input $0V \le VIN \le VDDQ$.

Input leakage currents include Hi-Z output leakage for all bi-directional buffers with tri-state outputs. 5. Dout is disabled, $0V \le VOUT \le VDDQ$.

CAPACITANCE (VDD = 3.0V & 3.3V, TA = 23°C, f = 1MHz, VREF =0.9V ± 50 mV)

| Pin | Symbol | Min | Мах | Unit | Note |
|----------------------------|--------|-----|-----|------|------|
| Clock | CCLK | 1.5 | 3.5 | pF | |
| RAS, CAS, WE, CS, CKE, DQM | CIN | 1.5 | 3.0 | pF | |
| Address | CADD | 1.5 | 3.0 | pF | |
| DQ0 ~ DQ15 | Соит | 2.0 | 4.5 | pF | |

| | | | | 1/4 of Full Array | 350 | | 400 | | | | |

NOTES:

1. Measured with outputs open.

- 2. Refresh period is 64ms.
- 3. Internal TCSR can be supported.

In commercial Temp : 45°C/70°C, In extended Temp : 45°C/85°C

4. It has +/-5 °C tolerance.

5. Unless otherwise noted, input swing level is CMOS(VIH /VIL=VDDQ/VSSQ).

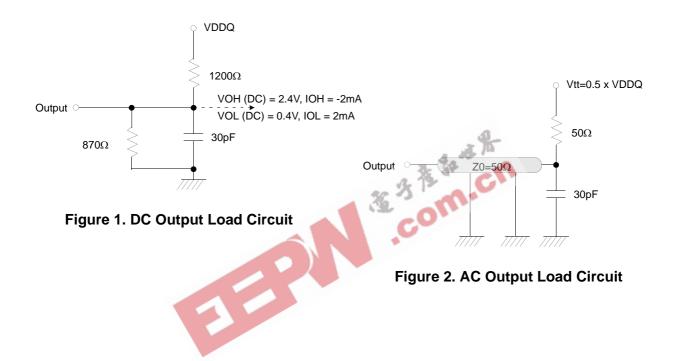

K4M561633G - R(B)N/G/L/F

Mobile SDRAM

AC OPERATING TEST CONDITIONS (VDD = 2.7V ~ 3.6V, TA = -25 to 85°C for Extended, -25 to 70°C for Commercial)

| Parameter | Value | Unit |
|---|--------------|------|
| AC input levels (Vih/Vil) | 2.4 / 0.4 | V |
| Input timing measurement reference level | 0.5 x VDDQ | V |
| Input rise and fall time | tr/tf = 1/1 | ns |
| Output timing measurement reference level | 0.5 x VDDQ | V |
| Output load condition | See Figure 2 | |

OPERATING AC PARAMETER

(AC operating conditions unless otherwise noted)

| Parameter | | Symbol | | Version | | Unit | Note |
|------------------------------------|----------|---------------|-----|------------|-----|------|------|
| Faranieter | | Symbol | -75 | -1H | -1L | Unit | Note |
| Row active to row active delay | / | trrd(min) | 15 | 18 | 18 | ns | 1 |
| RAS to CAS delay | | tRCD(min) | 18 | 18 | 24 | ns | 1 |

| Last data in to new col. addres | ss delay | tcoL(min) | | 1 | | CLK | 3 |
| Last data in to burst stop | | tBDL(min) | | 1 | | CLK | 3 |
| Col. address to col. address delay | | tccd(min) | | 1 | - | CLK | 5 |
| Number of valid output data | C | CAS latency=3 | 2 | | | | |
| Number of valid output data | | CAS latency=2 | 37 | | C | ea | 6 |
| Number of valid output data | C | CAS latency=1 | | 0 | | | |

NOTES:

1. The minimum number of clock cycles is determined by dividing the minimum time required with clock cycle time and then rounding off to the next higher integer.

2. Maximum burst refresh cycle : 8

3. Minimum delay is required to complete write.

4. Minimum tRDL=2CLK and tDAL(= tRDL + tRP) is required to complete both of last data write command(tRDL) and precharge command(tRP).

5. All parts allow every cycle column address change.

6. In case of row precharge interrupt, auto precharge and read burst stop.

| Paramete | - | Symbol | - | 75 | -1 | Н | -1 | IL | Unit | Note |

| | CAS latency=1 | | | - | | - | | 20 | | |

AC CHARACTERISTICS (AC operating conditions unless otherwise noted)

NOTES :

1. Parameters depend on programmed CAS latency.

2. If clock rising time is longer than 1ns, (tr/2-0.5)ns should be added to the parameter. 3. Assumed input rise and fall time (tr & tf) = 1ns.

If tr & tf is longer than 1ns, transient time compensation should be considered,

i.e., [(tr + tf)/2-1]ns should be added to the parameter.

NOTES :

1. OP Code : Operand Code

A0 ~ A12 & BA0 ~ BA1 : Program keys. (@MRS)

2. MRS can be issued only at all banks precharge state.

A new command can be issued after 2 CLK cycles of MRS.

3. Auto refresh functions are the same as CBR refresh of DRAM. The automatical precharge without row precharge command is meant by "Auto". Auto/self refresh can be issued only at all banks precharge state. Partial self refresh can be issued only after setting partial self refresh mode of EMRS.

4. BA0 ~ BA1 : Bank select addresses.

5. During burst read or write with auto precharge, new read/write command can not be issued. Another bank read/write command can be issued after the end of burst. New row active of the associated bank can be issued at tRP after the end of burst.

New row active of the associated bank can be issued at tRP after the end of bur 6. Burst stop command is valid at every burst longth

6. Burst stop command is valid at every burst length.

7. DQM sampled at the positive going edge of CLK masks the data-in at that same CLK in write operation (Write DQM latency is 0), but in read operation, it makes the data-out Hi-Z state after 2 CLK cycles. (Read DQM latency is 2).

(V=Valid, X=Don't Care, H=Logic High, L=Logic Low)

NOTES:

1.RFU(Reserved for future use) should stay "0" during MRS cycle. 2.If A9 is high during MRS cycle, "Burst Read Single Bit Write" function will be enabled.

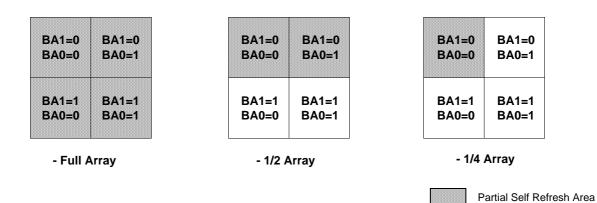

K4M561633G - R(B)N/G/L/F

Partial Array Self Refresh

1. In order to save power consumption, Mobile SDRAM has PASR option.

2. Mobile SDRAM supports 3 kinds of PASR in self refresh mode : Full Array, 1/2 of Full Array and 1/4 of Full Array.

Internal Temperature Compensated Self Refresh (TCSR)

- 1. In order to save power consumption, Mobile-SDRAM includes the internal temperature sensor and control units to control the self refresh cycle automatically according to the two temperature range ; 45 °C and 85 °C(for Extended), 70 °C(for Commercial) a. P
- 2. If the EMRS for external TCSR is issued by the controller, this EMRS code for TCSR is ignored. 0
- 3. It has +/-5 °C tolerance.

A The

B. POWER UP SEQUENCE

- 1. Apply power and attempt to maintain CKE at a high state and all other inputs may be undefined.
- Apply VDD before or at the same time as VDDQ.
- 2. Maintain stable power, stable clock and NOP input condition for a minimum of 200us.
- 3. Issue precharge commands for all banks of the devices.
- 4. Issue 2 or more auto-refresh commands.
- 5. Issue a mode register set command to initialize the mode register.
- 6. Issue a extended mode register set command to define DS or PASR operating type of the device after normal MRS.

For operating with DS or PASR, set DS or PASR mode in EMRS setting stage.

In order to adjust another mode in the state of DS or PASR mode, additional EMRS set is required but power up sequence is not needed again at this time. In that case, all banks have to be in idle state prior to adjusting EMRS set.

C. BURST SEQUENCE

1. BURST LENGTH = 4

| Initial A | Address | | Sociu | ential | | Interleave | | | | | | |
