SDLS097 - MARCH 1974 - REVISED MARCH 1988

'290, 'LS290 . . . DECADE COUNTERS
'293, 'LS293 . . . 4-BIT BINARY COUNTERS

 GND and V_{CC} on Corner Pins (Pins 7 and 14 Respectively)

description

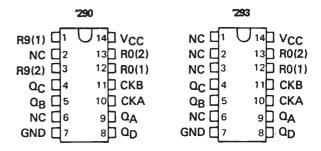

The SN54290/SN74290, SN54LS290/SN74LS290, SN54293/SN74293, and SN54LS293/SN74LS293 counters are electrically and functionally identical to the SN5490A/SN7490A, SN54LS90/SN74LS90, SN5493A/SN7493A, and SN54LS93/SN74LS93, respectively. Only the arrangement of the terminals has been changed for the '290, 'LS290, '293, and 'LS293.

Each of these monolithic counters contains four master-slave flip-flops and additional gating to provide a divide-by-two counter and a three-stage binary counter for which the count cycle length is divide-by-five for the '290 and 'LS290 and divide-by-eight for the '293 and 'LS293.

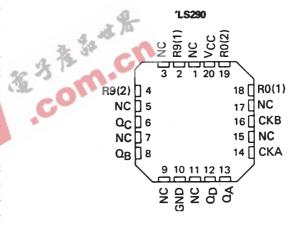

All of these counters have a gated zero reset and the '290 and 'LS290 also have gated set-to-nine inputs for use in BCD nine's complement applications.

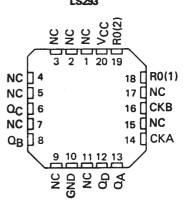

To use the maximum count length (decade or four-bit binary) of these counters, the B input is connected to the Ω_A output. The input count pulses are applied to input A and the outputs are as described in the appropriate function table. A symmetrical divide-byten count can be obtained from the '290 and 'LS290 counters by connecting the Ω_D output to the A input and applying the input count to the B input which gives a divide-by-ten square wave at output Ω_A .

NOTES: A. Output Q_A is connected to input B for BCD count.

- B. Output Q_D is connected to input A for bi-quinary
- C. Output QA is connected to input B.
- D. H = high level, L = low level, X = irrelevant

Pin numbers shown are for D, J, N, and W packages.

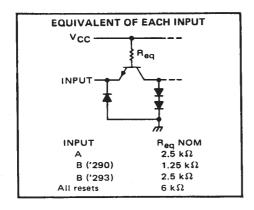

The J and K inputs shown without connection are for reference only and are functionally at a high level.

SDLS097 - MARCH 1974 - REVISED MARCH 1988

schematics of inputs and outputs

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

Supply voltage, VCC (see Note 1)										 				. 7 V
Input voltage								a.		 				5.5 V
Interemitter voltage (see Note 2)							à.	Th.		 				. 5.5 V
Operating free-air temperature range: SN54' Circ	uits				28	120			A	 		-55	°C t	o 125°C
SN74' Circ	uits			-/9	- X	d.			12				0°C	to 70°C
Storage temperature range			20	- 23	1							-65	°C t	o 150°C

NOTES: 1. Voltage values, except interemitter voltage, are with respect to network ground terminal.

This is the voltage between two emitters of a multiple-emitter transistor. For these circuits, this rating applies between the two R₀ inputs, and for the '290 circuit, it also applies between the two R9 inputs.

[#]f_{max} = maximum count frequency

 $^{^{\}ddagger}$ All typical values are at $V_{CC} = 5 \text{ V}$, $T_{A} = 25^{\circ}\text{C}$.

Not more than one output should be shorted at a time.

 $[\]P_{Q_A}$ outputs are tested at $I_{OL} = 16$ mA plus the limit value of I_{IL} for the B input. This permits driving the B input while maintaining full fan-out capability.

NOTE 3: ICC is measured with all outputs open, both Ro inputs grounded following momentary connection to 4.5 V, and all other inputs grounded.

tpLH = propagation delay time, low-to-high-level output

 $t_{\mbox{\footnotesize{PHL}}}$ = propagation delay time, high-to-low-level output

NOTE 4: Load circuits and voltage waveforms are shown in Section 1.

IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
