## 54ACQ573 • 54ACTQ573

### Quiet Series Octal Latch with TRI-STATE® Outputs

#### General Description

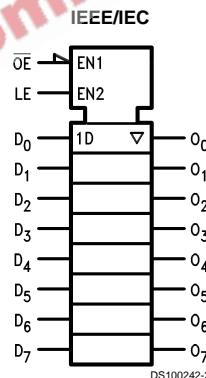

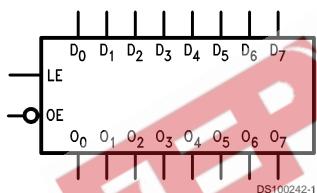

The 'ACQ/ACTQ573 is a high-speed octal latch with buffered common Latch Enable (LE) and buffered common Output Enable (OE) inputs. The 'ACQ/ACTQ573 is functionally identical to the 'ACQ/ACTQ373 but with inputs and outputs on opposite sides of the package. The 'ACQ/ACTQ utilizes NSC Quiet Series technology to guarantee quiet output switching and improved dynamic threshold performance. FACT Quiet Series™ features GTO™ output control and undershoot corrector in addition to a split ground bus for superior performance.

- Guaranteed simultaneous switching noise level and dynamic threshold performance
- Improved latch-up immunity
- Inputs and outputs on opposite sides of package allow easy interface with microprocessors
- Outputs source/sink 24 mA
- Faster prop delays than standard 'ACT573
- 4 kV minimum ESD immunity
- Standard Microcircuit Drawing (SMD)
  - 'ACTQ573: 5962-92194
  - 'ACQ573: 5962-92180

## Functional Description

The 'ACQ/ACTQ573 contains eight D-type latches with TRI-STATE output buffers. When the Latch Enable (LE) input is HIGH, data on the  $D_n$  inputs enters the latches. In this condition the latches are transparent, i.e., a latch output will change state each time its D input changes. When LE is LOW the latches store the information that was present on the D inputs a setup time preceding the HIGH-to-LOW transition of LE. The TRI-STATE buffers are controlled by the Output Enable ( $\bar{OE}$ ) input. When  $\bar{OE}$  is LOW, the buffers are enabled. When  $\bar{OE}$  is HIGH the buffers are in the high impedance mode but this does not interfere with entering new data into the latches.

## Truth Table

Inputs		Outputs	
$\bar{OE}$	LE	D	$O_n$
L	H	H	H
L	H	L	L
L	L	X	$O_0$
H	X	X	Z

H = HIGH Voltage

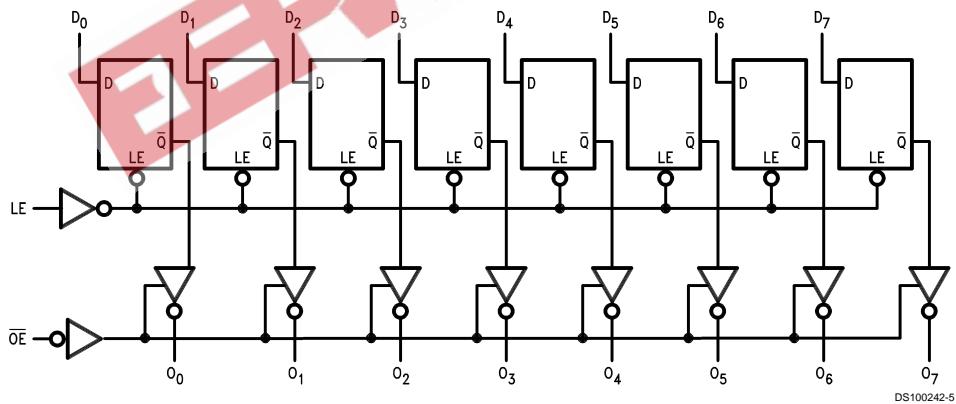

L = LOW Voltage

Z = High Impedance

X = Immaterial

$O_0$  = Previous  $O_0$  before HIGH-to-LOW transition of Latch Enable
