

54ACT564 Octal D-Type Flip-Flop with TRI-STATE[®] Outputs

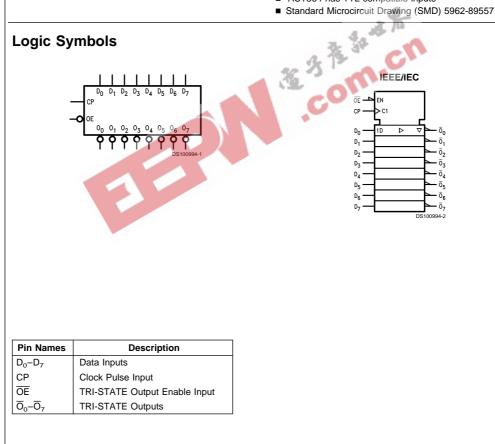

General Description

The 'ACT564 is a high-speed, low power octal flip-flop with a buffered common Clock (CP) and a buffered common Output Enable ($\overline{\text{OE}}$). The information presented to the D inputs is stored in the flip-flops on the LOW-to-HIGH Clock (CP) transition.

The 'ACT564 is functionally identical to the 'ACT574, but with inverted outputs.

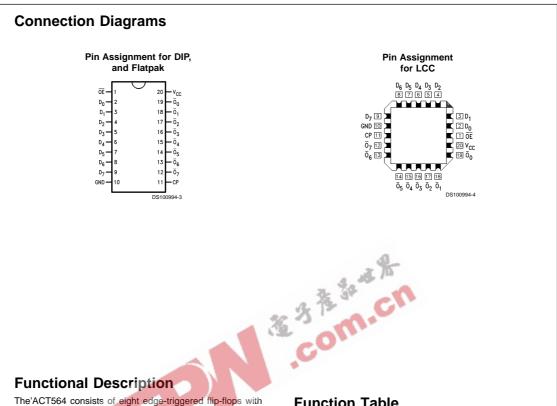

Features

- $\blacksquare~I_{\rm CC}$ and $I_{\rm OZ}$ reduced by 50%
- Inputs and outputs on opposite sides of package allowing easy interface with microprocessors
- Useful as input or output port for microprocessors
- Functionally identical to 'ACT574 but with inverted outputs
- TRI-STATE outputs for bus-oriented applications
- Outputs source/sink 24 mA
- 'ACT564 has TTL-compatible inputs

individual D-type inputs and TRI-STATE complement outputs. The buffered clock and buffered Output Enable are common to all flip-flops. The eight flip-flops will store the state of their individual D inputs that meet the setup and hold time requirements on the LOW-to-HIGH Clock (CP) transition. With the Output Enable (OE) LOW, the complement of the contents of the eight flip-flops are available at the outputs. When \overline{OE} is HIGH, the outputs go to the high impedance state. Operation of the \overline{OE} input does not affect the state of the flip-flops.

175°C

Note 1: Absolute maximum ratings are those values beyond which damage to the device may occur. The databook specifications should be met, without exception, to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. National does not recommend operation of FACT™ circuits outside databook specifications.
