## 54122/DM74122 Retriggerable Resettable Multivibrator

### 54122/DM74122 Retriggerable Resettable Multivibrator

#### General Description

The '122 features positive and negative DC level triggering inputs, complementary outputs, an optional 10 kΩ internal timing resistor and an overriding Direct Clear ( $\bar{C}_D$ ) input. When the circuit is in the quasi-stable (delay) state, another trigger applied to the inputs (per Truth Table) will cause the delay period to start again, without disturbing the outputs. This process can be repeated indefinitely and thus the output pulse period (Q HIGH,  $\bar{Q}$  LOW) can be made as long as desired. Alternatively, a delay period can be terminated

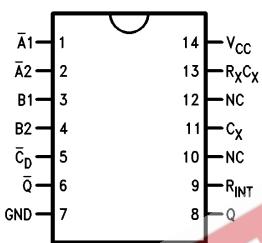

by a LOW signal applied to  $\bar{C}_D$ , which also prevents triggering. An internal connection from  $\bar{C}_D$  to the input gate makes it possible to trigger the circuit by a positive-going signal on  $\bar{C}_D$ , as shown in the Truth Table. For timing capacitor values greater than 1000 pF, the output pulse width is defined as follows:

$$t_w = 0.32 R_X C_X (1.0 + 0.7/R_X)$$

Where  $t_w$  is in ns,  $R_X$  is in kΩ and  $C_X$  is in pF.

V<sub>CC</sub> = Pin 14  
GND = Pin 7  
NC = Pins 10 and 12

Pin Names	Description
$\bar{A}_1, \bar{A}_2$	Trigger Inputs (Active Falling Edge)
$B_1, B_2$	Trigger Inputs (Active Rising Edge)
$\bar{C}_D$	Direct Clear Inputs (Active LOW)
Q, $\bar{Q}$	Outputs

## Absolute Maximum Ratings (Note)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	5.5V
Operating Free Air Temperature Range 54 DM74	−55°C to +125°C 0°C to +70°C
Storage Temperature Range	−65°C to +150°C

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

## Recommended Operating Conditions

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
