

## HIGH PERFORMANCE PRESSURE SENSOR MODEL 6-13

The **Model 6-13** is uniquely designed for use in a broad variety of applications where accurate, reliable, high performance pressure measurement is required.

The **Model 6-13** utilizes a micro-machined silicon pressure sensor that is isolated for all media by a 316L stainless steel diaphragm and high performance digital temperature compensation ASIC. This translates into excellent linearity, increased long-term stability & reliability.

Micro-machined silicon pressure sensors provide accuracies down to  $\pm 0.20\%$  with effectively no hysteresis and a long-term drift of less than 0.15% FSO for one (1) year & proof pressures greater than 3X the rated pressure.

All **Model 6-13** configurations have extremely robust EMI/RFI protection. The **Model 6-13** will not shift, drift, or fail in an EMI/RFI environment of greater than 10 volts/meter up to 1.0GHz.

The **Model 6-13** is hermetically sealed by welding & conforms to NEMA 4 & 4X enclosure requirements. (Except for vented gage configurations.)
