74HC/HCT4538

Dual retriggerable precision
monostable multivibrator

Product specification
File under Integrated Circuits, IC06

September 1993

Dual retriggerable precision monostable multivibrator

74HC/HCT4538

FEATURES

- Separate reset inputs
- Triggering from leading or trailing edge
- Output capability: standard
- I_{CC} category: MSI
- Power-on reset on-chip

GENERAL DESCRIPTION

The 74HC/HCT4538 are high-speed Si-gate CMOS devices and are pin compatible with "4538" of the "4000B" series. They are specified in compliance with JEDEC standard no. 7A.

The 74HC/HCT4538 are dual retriggerable-resettable monostable multivibrators. Each multivibrator has an active LOW trigger/retrigger input ($n\bar{A}_0$), an active HIGH

trigger/retrigger input (nA_1), an overriding active LOW direct reset input ($n\bar{R}_D$), an output (nQ) and its complement ($n\bar{Q}$), and two pins (nC_{TC} and nRC_{TC}) for connecting the external timing components C_t and R_t . Typical pulse width variation over temperature range is $\pm 0.2\%$.

The "4538" may be triggered by either the positive or the negative edges of the input pulse. The duration and accuracy of the output pulse are determined by the external timing components C_t and R_t . The output pulse width (T) is equal to $0.7 \times R_t \times C_t$. The linear design techniques guarantee precise control of the output pulse width.

A LOW level at $n\bar{R}_D$ terminates the output pulse immediately.

Schmitt-trigger action in the trigger inputs makes the circuit highly tolerant to slower rise and fall times.

QUICK REFERENCE DATA

GND = 0 V; $T_{amb} = 25\text{ }^\circ\text{C}$; $t_r = t_f = 6\text{ ns}$

SYMBOL	PARAMETER	CONDITIONS	TYPICAL		UNIT
			HC	HCT	
t_{PHL}/t_{PLH}	propagation delay $n\bar{A}_0, nA_1$ to $nQ, n\bar{Q}$	$C_L = 15\text{ pF}; V_{CC} = 5\text{ V}$	27	30	ns
C_I	input capacitance		3.5	3.5	pF
C_{PD}	power dissipation capacitance per multivibrator	notes 1 and 2	136	138	pF

Notes

1. C_{PD} is used to determine the dynamic power dissipation (P_D in μW):

$$P_D = C_{PD} \times V_{CC}^2 \times f_i + \sum (C_L \times V_{CC}^2 \times f_o) + 0.48 \times C_{EXT} \times V_{CC}^2 \times f_o + D \times 0.8 \times V_{CC} \text{ where:}$$

f_i = input frequency in MHz

f_o = output frequency in MHz

$\sum (C_L \times V_{CC}^2 \times f_o)$ = sum of outputs

C_L = output load capacitance in pF

V_{CC} = supply voltage in V

D = duty factor in %

C_{EXT} = timing capacitance in pF

2. For HC the condition is $V_I = \text{GND to } V_{CC}$
For HCT the condition is $V_I = \text{GND to } V_{CC} - 1.5\text{ V}$

ORDERING INFORMATION

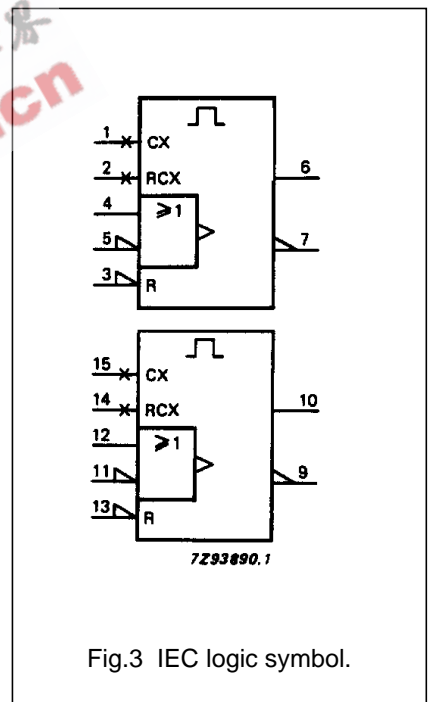

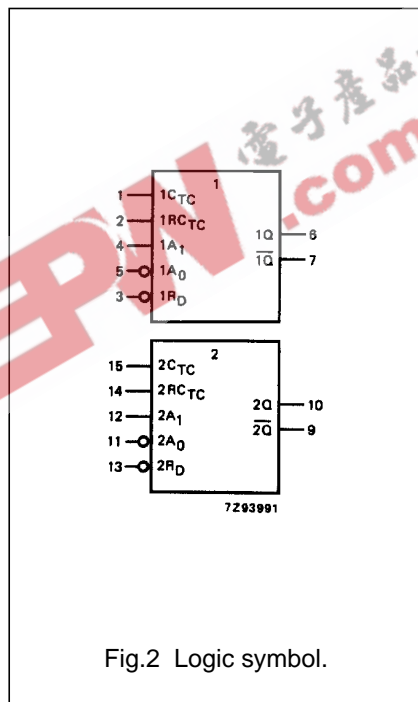

See "74HC/HCT/HCU/HCMOS Logic Package Information".

Dual retriggerable precision monostable multivibrator

74HC/HCT4538

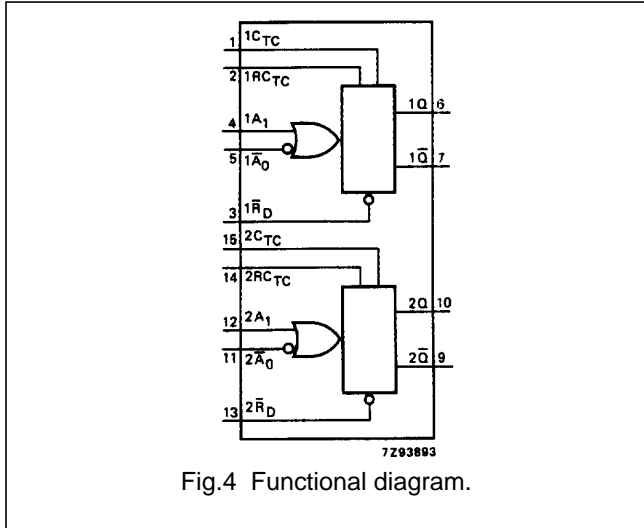

PIN DESCRIPTION

PIN NO.	SYMBOL	NAME AND FUNCTION
1, 15	$1C_{TC}, 2C_{TC}$	external capacitor connections
2, 14	$1RC_{TC}, 2RC_{TC}$	external resistor/capacitor connections
3, 13	$1\bar{R}_D, 2\bar{R}_D$	direct reset inputs (active LOW)
4, 12	$1A_1, 2A_1$	trigger inputs (LOW-to-HIGH, edge-triggered)
5, 11	$1\bar{A}_0, 2\bar{A}_0$	trigger inputs (HIGH-to-LOW, edge-triggered)
6, 10	$1Q, 2Q$	pulse outputs
7, 9	$1\bar{Q}, 2\bar{Q}$	complementary pulse outputs
8	GND	ground (0 V)
16	V_{CC}	positive supply voltage

Dual retriggerable precision monostable multivibrator

74HC/HCT4538

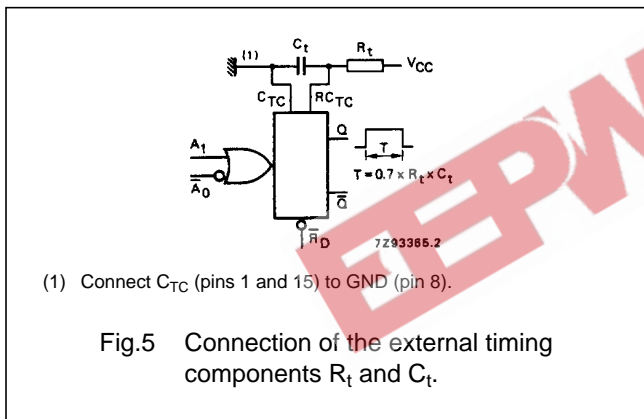

FUNCTION TABLE

INPUTS			OUTPUTS	
$n\bar{A}_0$	nA_1	$n\bar{R}_D$	nQ	$n\bar{Q}$
↓	L	H		
H	↑	H		
X	X	L	L	H

Notes

- 1. H = HIGH voltage level
- L = LOW voltage level
- X = don't care
- ↑ = LOW-to-HIGH transition
- ↓ = HIGH-to-LOW transition
- = one HIGH level output pulse
- = one LOW level output pulse

DC CHARACTERISTICS FOR 74HCT

For the DC characteristics see *"74HC/HCT/HCU/HCMOS Logic Family Specifications"*.

Output capability: standard

I_{CC} category: MSI

Note to HCT types

The value of additional quiescent supply current (ΔI_{CC}) for a unit load of 1 is given in the family specifications.

To determine ΔI_{CC} per input, multiply this value by the unit load coefficient shown in the table below.

INPUT	UNIT LOAD COEFFICIENT
$\overline{nA_0}$, nA_1	0.50
$\overline{nR_D}$	0.65

AC CHARACTERISTICS FOR 74HCT

74HC/HCT4538

Fig.11 Power-down protection circuit.

Power-down considerations

A large capacitor (C_X) may cause problems when powering-down the monostable due to the energy stored in this capacitor. When a system containing this device is powered-down or a rapid decrease of V_{CC} to zero occurs, the monostable may sustain damage, due to the capacitor discharging through the input protection diodes. To avoid this possibility, use a damping diode (D_X) preferably a germanium or Schottky type diode able to withstand large current surges and connect as shown in Fig.11.
