74LCX16373

Low Voltage 16-Bit Transparent Latch with 5V Tolerant Inputs and Outputs

General Description

The LCX16373 contains sixteen non-inverting latches with 3-STATE outputs and is intended for bus oriented applications. The device is byte controlled. The flip-flops appear transparent to the data when the Latch Enable (LE) is HIGH. When LE is LOW, the data that meets the setup time is latched. Data appears on the bus when the Output Enable ($\overline{\text{OE}}$) is LOW. When $\overline{\text{OE}}$ is HIGH, the outputs are in a high impedance state.

The LCX16373 is designed for low voltage (2.5V or 3.3V) V_{CC} applications with capability of interfacing to a 5V signal environment

The LCX16373 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining CMOS low power dissipation.

Features

- 5V tolerant inputs and outputs
- 2.3V-3.6V V_{CC} specifications provided
- 5.4 ns t_{PD} max (V_{CC} = 3.3V), 20 μ A I_{CC} max
- Power down high impedance inputs and outputs
- Supports live insertion/withdrawal (Note 1)
- \blacksquare ±24 mA output drive (V_{CC} = 3.0V)
- Uses patented noise/EMI reduction circuitry
- Latch-up performance exceeds 500 mA
- ESD performance:
 - Human body model > 2000V
 - Machine model > 200V
- Also packaged in plastic Fine-Pitch Ball Grid Array (FBGA)

Note 1: To ensure the high-impedance state during power up or down, $\overline{\text{OE}}$ should be tied to V_{CC} through a pull-up resistor: the minimum value or the resistor is determined by the current-sourcing capability of the driver.

Ordering Code:

| Order Number | Package Number | Package Description |
|---------------------------------|----------------|-----------------------------------------------------------------------------|
| 74LCX16373G (Note 2)(Note 3) | BGA54A | 54-Ball Fine-Pitch Ball Grid Array (FBGA), JEDEC MO-205, 5.5mm Wide |
| 74LCX16373MEA (Note 3) | MS48A | 48-Lead Small Shrink Outline Package (SSOP), JEDEC MO-118, 0.300" Wide |
| 74LCX16373MTD (Note 3) | MTD48 | 48-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide |

Note 2: Ordering code "G" indicates Trays.

Note 3: Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

Functional Description

The LCX16373 contains sixteen D-type latches with 3-STATE standard outputs. The device is byte controlled with each byte functioning identically, but independent of the other. Control pins can be shorted together to obtain full 16-bit operation. The following description applies to each byte. When the Latch Enable (LEn) input is HIGH, data on the $\rm I_n$ enters the latches. In this condition the latches are transparent, i.e. a latch output will change state each time

its I input changes. When LE $_n$ is LOW, the latches store information that was present on the I inputs a setup time preceding the HIGH-to-LOW transition of LE $_n$. The 3-STATE standard outputs are controlled by the Output Enable $(\overline{\text{OE}}_n)$ input. When $\overline{\text{OE}}_n$ is LOW, the standard outputs are in the 2-state mode. When $\overline{\text{OE}}_n$ is HIGH, the standard outputs are in the high impedance mode but this does not interfere with entering new data into the latches.

Logic Diagrams

Please note that this diagram is provided only for the understanding of logic operations and should not be used to estimate propagation delays.

| | | $V_{CC} = 2.3V - 2.7V$ | | ±8 | |
| T _A | Free-Air Operating Temperature | | -40 | 85 | °C |
| Δt/ΔV | Input Edge Rate, V _{IN} = 0.8V–2.0V, V _{CC} = 3.0V | | 0 | 10 | ns/V |

Note 4: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 5: Io Absolute Maximum Rating must be observed.

Note 6: Unused inputs must be held HIGH or LOW. They may not float.
