

CTS1, CTS13, CTS32, 749DX

Vishay Sprague

Hermetically Sealed, Axial-Lead, To CECC Specifications

FEATURES

- Hermetically sealed metal case with plastic film insulation
- Extended capacitance range (type 749DX)
- High operational stability with both time and temperature
- Low leakage current
- Low dissipation factor
- Capability to withstand high inrush currents (type CTS32)

APPLICATIONS

Performance and reliability has been proven in a wide range of applications such as: filtering, by-pass, coupling, energy storage, timing circuits.

PERFORMANCE CHARACTERISTICS

Operating Temperature:

- 55°C to + 85°C (types CTS13, CTS32)
- 55°C to + 125°C (types CTS1, 749DX)

Vishay Sprague

PERFORMANCE CHARACTERISTICS

- Operating Temperature:** - 55°C to + 85°C with rated DC voltage U_R applied. + 85°C to + 125°C with linear voltage derating to category voltage U_C (only for types CTS1, 749DX)
- Capacitance and Tolerance:** Capacitance measured at 100Hz and + 25°C shall be within the specified tolerance limits of the nominal rating. Capacitance measurement shall be made by means of a polarized capacitance bridge. The polarizing voltage shall be of 2.2 volts. The maximum voltage applied during measurements shall be 1.0 volt rms at 100 Hz and + 25°C.
- Reverse Voltage:** These capacitors are capable of withstanding peak voltage in the reverse direction equal to: 15% of the rated DC voltage at + 25°C, 5% of the rated DC voltage at + 85°C
- Surge Voltage:** Table 1

PRODUCT TYPE	SURGE VOLTAGE @ + 85°C	SURGE VOLTAGE @ + 125°C
CTS13/CTS32	1.30 U_R	—
749DX/CTS1	1.30 U_R	1.30 U_C

Capacitors shall withstand the surge voltage applied in series with a 1000 ohm resistor, at the rate of one half-minute on, five and a half-minute off, for 1000 successive test cycles at + 85°C or at + 125°C. After test, dissipation factor and leakage current shall meet the initial requirements at + 25°C (see below), capacitance change shall not exceed $\pm 10\%$ of initial value at + 25°C.

- Leakage current:** Rated voltage U_R shall be applied to capacitors during five minutes with a resistor of 1000 ohm in series with each capacitor, before making DC leakage current measurements. The leakage current shall not exceed the following limits:

Table 2

TEMPERATURE	CTS1/CTS13/CTS32/749DX
+ 25°C	0.01 $C_R \times U_R$ or 1 μ A whichever is greater
+ 85°C	0.1 $C_R \times U_R$ or 10 μ A whichever is greater
+125°C	0.125 $C_R \times U_R$ or 12.5 μ A whichever is greater

- Dissipation factor:** The dissipation factor, when measured at 100 Hz, shall not exceed the values below:

Table 3

TEMP.	CTS1/CTS13/CTS32		749DX	
	$C_R U_R \leq 1900$	$C_R U_R > 1900$	$C_R \leq 100$	$C_R > 100$
- 55°C	9%	11%	8%	10%
+ 25°C	6%	8%	6%	8%
+ 85°C	9%	11%	—	—
+ 125°C*	12%	14%	10%	11%

*not applicable for CTS13/32

- Stability at low and high temperature:** Capacitance change with temperature shall not exceed the limits of the following table, leakage current and dissipation factor shall be within the limits specified in Tables 2 and 3.

Table 4

TEMPERATURE	CTS1/CTS13/CTS32/749DX
- 55°C	- 10%
+ 85°C	+ 12%
+ 125°C *	+ 15%

*not applicable for CTS13/32

- Impedance:** The impedance measured at 100 kHz and 25°C shall not exceed the following values:

Table 5

CASE CODE	Z (Ω) *
A	10
B	5
C	2
D	1

* not applicable for $C_R \leq 0.68 \mu$ F

- Life test:** After 2000 hours at + 85°C with rated DC voltage applied, or after 2000 hours at + 125°C with category DC voltage applied (for types CTS1, 749DX only) capacitors shall meet the requirements in table 6.

Table 6

PRODUCT TYPE	CAPACITANCE CHANGE	DISSIPATION FACTOR	DC LEAKAGE CURRENT
CTS1	Within	Within	Within 125%
CTS13	$\pm 10\%$ of	initial	of initial
CTS32	initial value	requirement	requirements
749DX	@ +25°C	@ +25°C	@ +25°C

PERFORMANCE CHARACTERISTICS (CONT'D)

10. Humidity test: After 56 days (1350 hours) at + 40°C, 90 to 95% of relative humidity (per IEC 68-2-3) with no voltage applied, capacitors shall meet the requirements in table 7 below.

Table 7

CAPACITANCE CHANGE	Within ± 3% of initial value
DC LEAKAGE CURRENT	Within initial requirement @ +25°C - Table 2
DISSIPATION FACTOR	Within initial requirement @ +25°C - Table 3

11. Charge-discharge test (CTS32): Capacitors shall withstand 1,000,000 cycles at + 85°C of 0.5 second charge at DC rated voltage, 0.5 second discharge in an equivalent load resistance of the test fixture lower than 0.5 ohm. Following test, capacitors shall meet the requirements in table 8 below.

Table 8

CAPACITANCE CHANGE	Within ± 5% of initial value @ + 25°C
DC LEAKAGE CURRENT	Within initial requirement @ +25°C - Table 2
DISSIPATION FACTOR	Within initial requirement @ +25°C - Table 3

Typical values of charge-discharge current (per above test conditions)

RATED VOLTAGE U_r (V)	CHARGE-DISCHARGE CURRENT (A)
6.3	13
10	20
16	32
25	50
40	80
50	100
63	126

12. Insulation test: For capacitors with insulating sleeves, a DC voltage of 100 volts shall be applied for one minute between the case of the capacitor and a metal "V" block in intimate contact with the insulating sleeve. The insulating resistance measured in these conditions shall be at least 100 megohms.

13. Lead pull test: Leads shall withstand the following test (IEC 68 - 2 - 2):

- Tensile stress of 5N (cases A and B) or 10N (cases C and D) for 10 seconds in any direction
- One bend in each direction
- Two consecutive rotations of 180°

GUIDE TO APPLICATION

1. AC Ripple Current: The maximum allowable ripple current shall be determined from the formula:

$$I_{rms} = \sqrt{\frac{P}{R_{ESR}}} \quad \text{where}$$

P = Power Dissipation in Watts at + 25°C as given below

R_{ESR} = The capacitor Equivalent Series Resistance at the specified frequency.

2. AC Ripple Current: The maximum allowable ripple voltage shall be determined from the formula:

$$V_{rms} = \sqrt{\frac{P}{R_{ESR}}} \times Z, \quad \text{where}$$

Z = The capacitor Impedance at the specified frequency.

The calculations are summarized on the graphs page 7 giving the maximum available ripple voltage as a function of frequency.

However, the sum of the peak AC voltage plus the DC voltage shall not exceed the rated DC voltage at + 85°C of the capacitor. The sum of the negative peak AC voltage plus the DC voltage shall not allow a voltage reversal exceeding 15% of the rated DC voltage.

3. AC Ripple Current or Voltage Derating Factor: If these capacitors are to be operated at temperatures above + 25°C, the permissible rms ripple current or voltage shall be calculated using the derating factors in the table below:

TEMPERATURE	DERATING FACTOR
+ 25°C	1.0
+ 55°C	0.8
+ 85°C	0.6
+ 125°C	0.4

4. Power Dissipation: Power dissipation will be affected by the heat sinking capability of the mounting surface. Non-sinusoidal ripple current may produce heating effects which differ from those shown in the following table. It is important that the equivalent I_{rms} value be established when calculating permissible operating levels.

CASE CODE	POWER DISSIPATION @ + 25°C (WATTS)
A	0.115
B	0.145
C	0.185
D	0.225

MARKING

Capacitors shall be marked with SPRAGUE and/or the registered trademark 2 at vendor's option ; the type number ; rated capacitance and tolerance (with a letter code, if different from $\pm 20\%$, $K = \pm 10\%$; $J = \pm 5\%$) ; rated DC voltage at $+ 85^\circ\text{C}$ and the date code of manufacture.

Capacitors shall be marked on one end with a "plus" sign (+) to identify the positive terminal.
