

AZ100LVE310

ECL/PECL 2:8 Differential Clock Driver

FEATURES

- Operating Range of 3.0V to 5.5V
- Low Skew
- Guaranteed Skew Spec
- Differential Design
- V_{BB} Output
- 75k Ω Internal Input Pulldown Resistors
- Direct Replacement for ON Semiconductor MC100LVE310 & MC100E310

PACKAGE AVAILABILITY

PACKAGE	PART NO.	MARKING

PLCC 28 T&R	AZ100LVE310FNR2	AZM100LVE310

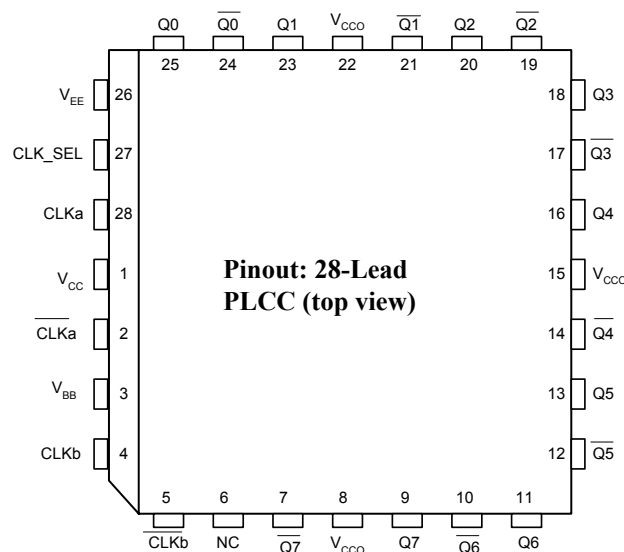

DESCRIPTION

The AZ100LVE310 is a low skew 2:8 fanout buffer designed with clock distribution in mind. The device features fully differential clock paths to minimize both device and system skew. The AZ100LVE310 offers two selectable clock inputs allowing redundant or test clocks to be incorporated into the system clock trees.

The AZ100LVE310 provides a V_{BB} output for single-ended use or a DC bias reference for AC coupling to the device. For single-ended input applications, the V_{BB} reference should be connected to one side of the CLKa/CLKb differential input pair. The input signal is then fed to the other CLKa/CLKb input. The V_{BB} pin should be used only as a bias for the AZ100LVE310 as its current sink/source capability is limited. When used, the V_{BB} pin should be bypassed to ground via a 0.01 μ F capacitor.

Both sides of the differential output must be terminated into 50 Ω to ensure that the tight skew specification is met, even if only one side is used. In most applications all eight differential pairs will be used and therefore terminated. In the case where fewer than eight pairs are used, all output pairs on the same package side (sharing the same V_{CC0}) as the pairs being used should be terminated to maintain minimum skew. Failure to do this will result in small degradations of propagation delay (on the order of 10–20ps) of the outputs being used; while not being catastrophic to most designs this will result in an increase in skew.

NOTE: Specifications in the ECL/PECL tables are valid when thermal equilibrium is established.

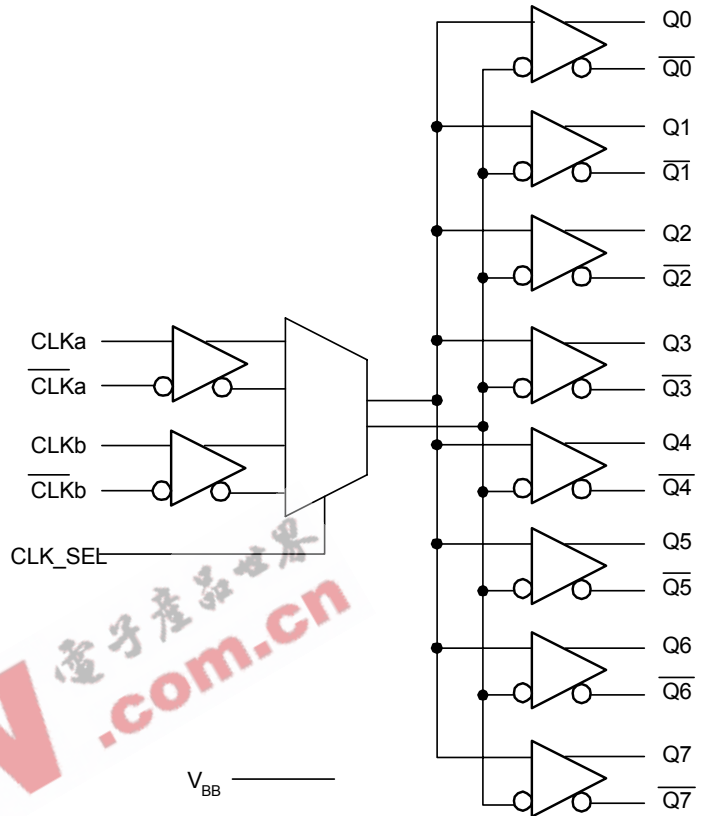

AZ100LVE310

LOGIC SYMBOL

PIN DESCRIPTION

PIN	FUNCTION
CLKa, $\overline{\text{CLKa}}$	Differential Input Pairs
CLKb, $\overline{\text{CLKb}}$	Differential Input Pairs
CLK_SEL	Input Clock Select
Q0, $\overline{\text{Q0}}$ – Q7, $\overline{\text{Q7}}$	Differential Output Pairs
V _{BB}	V _{BB} Output
V _{CC} , V _{CC0}	Positive Supply
V _{EE}	Negative Supply
NC	No Connect

CLK_SEL	Input Clock
0	CLKa Selected
1	CLKb Selected

Absolute Maximum Ratings are those values beyond which device life may be impaired.

Symbol	Characteristic	Rating	Unit
V _{CC}	PECL Power Supply (V _{EE} = 0V)	0 to +8.0	Vdc
V _I	PECL Input Voltage (V _{EE} = 0V)	0 to +6.0	Vdc
V _{EE}	ECL Power Supply (V _{CC} = 0V)	-8.0 to 0	Vdc
V _I	ECL Input Voltage (V _{CC} = 0V)	-6.0 to 0	Vdc
I _{OUT}	Output Current --- Continuous --- Surge	50 100	mA
T _A	Operating Temperature Range	-40 to +85	°C
T _{STG}	Storage Temperature Range	-65 to +150	°C

100K ECL DC Characteristics (V_{EE} = -3.0V to -5.5V, V_{CC} = V_{CC0} = GND)

t_r / t_f	Rise/Fall Time 20 – 80%	250	450	650	275	375	600	275	375	600	275	375	600	ps

- The differential propagation delay is defined as the delay from the crossing point of the differential input signals to the crossing point of the differential output signals.
- The single-ended propagation delay is defined as the delay from the 50% point of the input signal to the 50% point of the output signal.
- The within-device skew is defined as the worst-case difference between any two similar delay paths within a single device.
- V_{PP} is the minimum peak-to-peak differential input swing for which AC parameters are guaranteed. The $V_{PP}(\text{min})$ is AC limited for the LVE310, because differential input as low as 50 mV will still produce full ECL levels at the output.
- V_{CMR} is defined as the range within which the V_{IH} level may vary, with the device still meeting the propagation delay specification. The V_{IL} level must be such that the peak-to-peak voltage is less than 1.0V and greater than or equal to $V_{PP}(\text{min})$.

NOTES:

- DATUMS -L-, -M-, AND -N- DETERMINED WHERE TOP OF LEAD SHOULDER EXITS PLASTIC BODY AT MOLD PARTING LINE.
- DIMENSION G1, TRUE POSITION TO BE MEASURED AT DATUM -T-, SEATING PLANE.
- DIMENSIONS R AND U DO NOT INCLUDE MOLD FLASH. ALLOWABLE MOLD FLASH IS 0.010mm (0.250in.) PER SIDE.
- DIMENSIONING AND TOLERANCING PER ANSI Y14.5M, 1982.
- CONTROLLING DIMENSION: INCH.
- THE PACKAGE TOP MAY BE SMALLER THAN THE PACKAGE BOTTOM BY UP TO 0.012mm (0.300in.). DIMENSIONS R AND U ARE DETERMINED AT THE OUTERMOST EXTREMES OF THE PLASTIC BODY EXCLUSIVE OF MOLD FLASH, THE BAR BURRS, GATE BURRS AND INTERLEAD FLASH, BUT INCLUDING ANY MISMATCH BETWEEN THE TOP AND BOTTOM OF THE PLASTIC BODY.
- DIMENSION H DOES NOT INCLUDE DAMBAR PROTRUSION OR INTRUSION. THE DAMBAR PROTRUSION(S) SHALL NOT CAUSE THE H DIMENSION TO BE SMALLER THAN 0.025mm (0.635in.).
