DM54LS323/DM74LS323
8-Bit Universal Shift/Storage Register
with Synchronous Reset and Common I/O Pins
General Description

The 'LS323 is an 8-bit universal shift/storage register with TRI-STATE® outputs. Its function is similar to the 'LS299 with the exception of Synchronous Reset. Parallel load inputs and flip-flop outputs are multiplexed to minimize pin count. Separate inputs and outputs are provided for flip-flops Q0 and Q7 to allow easy cascading. Four operation modes are possible: hold (store), shift left, shift right, and parallel load. All modes are activated on the LOW-to-HIGH transition of the Clock.

Features

■ Common I/O for reduced pin count
■ Four operation modes: shift left, shift right, parallel load and store
■ Separate continuous inputs and outputs from Q0 and Q7 allow easy cascading
■ Fully synchronous reset
■ TRI-STATE outputs for bus oriented applications

Pin Names	Description
CP	Clock Pulse Input (Active Rising Edge)
D$_S$0	Serial Data Input for Right Shift
D$_S$7	Serial Data Input for Left Shift
S0, S1	Mode Select Inputs
$\overline{SR}$	Synchronous Reset Input (Active LOW)
$\overline{OE}$1, $\overline{OE}$2	TRI-STATE Output Enable Inputs (Active LOW)
I/O0–I/O7	Parallel Data Inputs or TRI-STATE Parallel Outputs
Q0, Q7	Serial Outputs

TRI-STATE® is a registered trademark of National Semiconductor Corporation.

Absolute Maximum Ratings (Note)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	7V
Operating Free Air Temperature Range	
DM54LS	−55°C to +125°C
DM74LS	0°C to +70°C
Storage Temperature Range	−65°C to +150°C

Note: *The ''Absolute Maximum Ratings'' are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the ''Electrical Characteristics'' table are not guaranteed at the absolute maximum ratings. The ''Recommended Operating Conditions'' table will define the conditions for actual device operation.*

Recommended Operating Conditions

Functional Description

The 'LS323 contains eight edge-triggered D-type flip-flops and the interstage logic necessary to perform synchronous reset, shift left, shift right, parallel load and hold operations. The type of operation is determined by S0 and S1 as shown in the Mode Select Table. All flip-flop outputs are brought out through TRI-STATE buffers to separate I/O pins that also serve as data inputs in the parallel load mode. Q0 and Q7 are also brought out on other pins for expansion in serial shifting of longer words.

A LOW signal on $\overline{SR}$ overrides the Select inputs and allows the flip-flops to be reset by the next rising edge of CP. All other state changes are also initiated by the LOW-to-HIGH CP transition. Inputs can change when the clock is in either state provided only that the recommended setup and hold times, relative to the rising edge of CP, are observed.

A HIGH signal on either $\overline{OE}1$ or $\overline{OE}2$ disables the TRI-STATE buffers and puts the I/O pins in the high impedance state. In this condition the shift, load, hold and reset operations can still occur. The TRI-STATE buffers are also disabled by HIGH signals on both S0 and S1 in preparation for a parallel load operation.
Mode Select Table

Inputs				Response
$\overline{SR}$	S1	S0	CP	
L	X	X	⟋	Synchronous Reset; Q0–Q7 = LOW
H	H	H	⟋	Parallel Load; $I/O_n \longrightarrow Q_n$
H	L	H	⟋	Shift Right; DS0 $\longrightarrow$ Q0, Q0 $\longrightarrow$ Q1, etc.
H	H	L	⟋	Shift Left; DS7 $\longrightarrow$ Q7, Q7 $\longrightarrow$ Q6, etc.
H	H	H	X	Hold

H = HIGH Voltage Level
L = LOW Voltage Level
X = Immaterial

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.

2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
