DESCRIPTION

The **HCC4048B** (extended temperature range) and **HCF4048B** (intermediate temperature range) are monolithic integrated circuit, available in 16-lead dual in-line plastic or ceramic package and plastic micro package. The **HCC/HCF4048B** is an 8-input gate having four control inputs. Three binary control inputs - K_a , K_b , and K_c - provide the implementation of eight different logic functions. These functions are OR, NOR, AND, NAND, OR/AND, OR/NAND, AND/OR and AND/NOR. A fourth control input K_d provides the user with a 3-state output. When control input K_d is high the output is either a logic 1 or a logic 0 depending on the inner states. When control input K_d is low, the output is an open circuit. This feature enables the user to connect this device to a common bus line. In addition to the eight input lines, an EXPAND input is provided that permits the user to increase the number of inputs to one **HCC/HCF4048B**. For example, two **HCC/HCF4048B**'s can be cascaded to provide a 16-input multifunction gate. When the EXPAND input is not used, it should be connected to V_{SS} .
