Description

The MOC8021M and MOC8050M are photodarlington-type optically coupled optocoupler. The devices have a gallium arsenide infrared emitting diode coupled with a silicon darlington phototransistor.

Schematic

Absolute Maximum Ratings ($T_A = 25^\circ\text{C}$ Unless otherwise specified.)

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.
