# Am26LS29

Quad Three-State Single Ended RS-423 Line Driver

## DISTINCTIVE CHARACTERISTICS

- Four single ended line drivers in one package for maximum package density
- Output short-circuit protection
- Individual rise time control for each output
- High capacitive load drive capability
- Low  $I_{CC}$  and  $I_{EE}$  power consumption (26mW/driver typ.)
- Meets all requirements of RS-423
- Three-state outputs for bus oriented systems
- Outputs do not clamp line with power off or in hi-impedance state over entire transmission line voltage range of RS-423
- Low current PNP inputs compatible with TTL, MOS and CMOS
- Available in military and commercial temperature range
- Advanced low power Schottky processing

## GENERAL DESCRIPTION

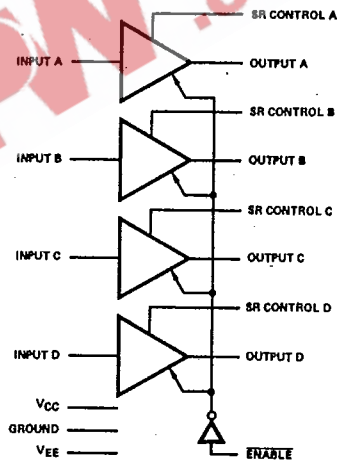

The Am26LS29 is a quad single ended line driver, designed for digital data transmission. The Am26LS29 meets all the requirements of EIA Standard RS-423 and Federal STD 1030. It features four buffered outputs with high source and sink current, and output short circuit protection.

A slew rate control pin allows the use of an external capacitor to control slew rate for suppression of near end cross talk to receivers in the cable.

The Am26LS29 has three-state outputs for bus oriented systems. The outputs in the hi-impedance state will not clamp the line over the transmission line voltage of RS-423. A typical full duplex system would use the Am26LS29 line driver and up to twelve Am26LS32 line receivers or an Am26LS32 line receiver and up to thirty-two Am26LS29 line drivers with only one enabled at a time and all others in the three-state mode.

The Am26LS29 is constructed using advanced low-power Schottky processing.

**ORDERING INFORMATION**

AMD products are available in several packages and operating ranges. The order number is formed by a combination of the following: Device number, speed option (if applicable), package type, operating range and screening option (if desired).

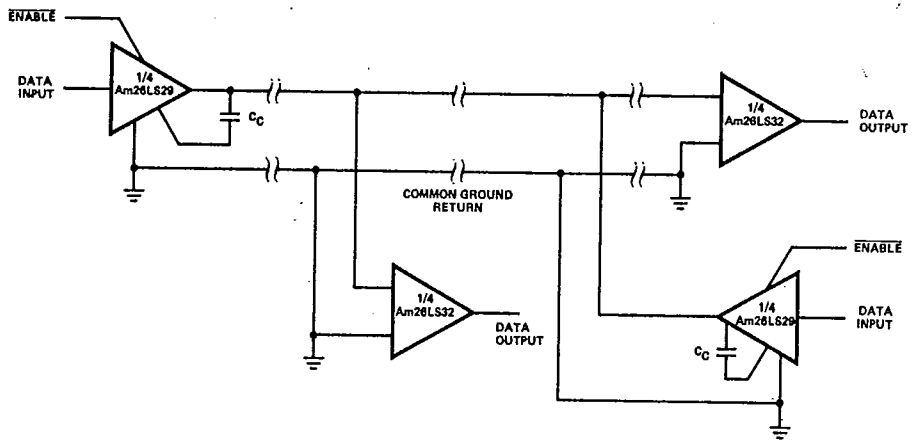

Valid Combinations	
Am26LS29	PC DC, DM FM XC, XM

**ABSOLUTE MAXIMUM RATINGS**

Storage Temperature ..... -65°C to +150°C  
 Supply Voltage  
   V+ ..... 7.0V  
   V- ..... -7.0V  
 Power Dissipation ..... 600mW  
 Input Voltage ..... -0.5 to +15.0V  
 Output Voltage (Power Off) ..... ±15V  
 Lead Soldering Temperature (10 seconds) ..... 300°C

*Stresses above those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent device failure. Functionality at or above these limits is not implied. Exposure to absolute maximum ratings for extended periods may affect device reliability.*

**OPERATING RANGES**

Commercial (C) Devices  
 Temperature ..... 0°C to +70°C  
 Supply Voltage (V<sub>CC</sub>) ..... +4.75V to +5.25V  
   (V<sub>EE</sub>) ..... -4.75V to -5.25V  
 Military (M) Devices  
 Temperature ..... -55°C to +125°C  
 Supply Voltage (V<sub>CC</sub>) ..... +4.5V to +5.5V  
   (V<sub>EE</sub>) ..... -4.75 to -5.5V

*Operating ranges define those limits over which the functionality of the device is guaranteed.*
