**NOTES:**

1. These ratings are limiting values above which the serviceability of any individual semiconductor device may be impaired.
  2. These are steady state limits. The factory should be consulted on applications involving pulsed or low duty cycle operations.
  3. These ratings give a maximum junction temperature of 175°C and junction-to-case thermal resistance of 150°C/W (derating factor of 6.7 mW/°C) for 2N706. These ratings give a maximum junction temperature of 150°C and (TO-92) junction-to-case thermal resistance of 125°C/W (derating factor of 8.0 mW/°C), junction-to-ambient thermal resistance of 200°C/W (derating factor of 5.0 mW/°C) for MPS706 and MPS706A; (TO-236) junction-to-ambient thermal resistance of 357°C/W (derating factor of 2.8 mW/°C).
  4. Rating refers to a high current point where collector to emitter voltage is lowest.
  5. Pulse conditions: length  $\leq 12 \mu s$ ; duty cycle = 1% for MPS706, MPS706A; length = 300μs; duty cycle = 1% for 2N706.
  6. For product family characteristic curves, refer to Curve Set T132 for 2N706; T162 for MPS706 and MPS706A.
