## FST34170

# 17-Bit to 34-Bit Multiplexer/Demultiplexer Bus Switch

### **General Description**

The Fairchild Switch FST34170 is a 17-bit to 34-bit highspeed CMOS TTL-compatible multiplexer/demultiplexer bus switch. The low on resistance of the switch allows inputs to be connected to outputs without adding propagation delay or generating additional ground bounce noise.

The device can be used in applications where two buses need to be addressed simultaneously. The FST34170 is designed so that the A Port demultiplexes into  $\rm B_1$  or  $\rm B_2$  or both

Two select (SEL $_1$ , SEL $_2$ ) inputs provide switch enable control

#### **Features**

- Slower Output Enable times prevent signal disruption
- $\blacksquare$  4 $\Omega$  switch connection between two ports.
- Minimal propagation delay through the switch.
- Low I<sub>CC</sub>.
- Zero bounce in flow-through mode.
- Control inputs compatible with TTL level.
- See Applications Note AN-5008 for details
