FEMTOCLOCKSTM CRYSTAL-TO-LVCMOS/LVTTL Frequency Synthesizer

GENERAL DESCRIPTION

The ICS840001-31 is a two output LVCMOS/ LVTTL Synthesizer and a member of the HiPerClocks[™] family of high performance devices from ICS. One output is the LVCMOS/ LVTTL main synthesized clock output (Q) and one

output is a three-state LVCMOS/LVTTL reference clock (REF_CLK) output at the frequency of the crystal oscillator. The device can accept 26.5625MHz and 40MHz crystals and can synthesize 106.25MHz or 100MHz outputs. The ICS840001-31 has excellent <1ps phase jitter performance over the 637kHz - 10MHz integration range. The ICS840001-31 is packaged in a 3mm x 3mm 16-pin VFQFN, making it ideal for use on space constrained boards.

APPLICATION INFORMATION

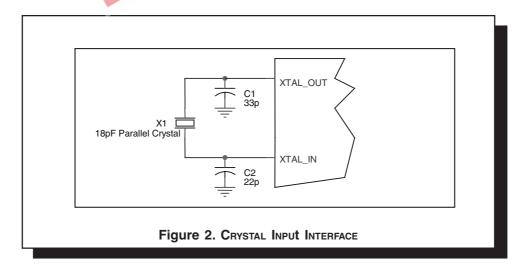

Power Supply Filtering Techniques

As in any high speed analog circuitry, the power supply pins are vulnerable to random noise. The ICS840001-31 provides separate power supplies to isolate any high switching noise from the outputs to the internal PLL. $V_{\text{DD}},\,V_{\text{DDA}}$ and V_{DDO} should be individually connected to the power supply plane through vias, and bypass capacitors should be used for each pin. To achieve optimum jitter performance, power supply isolation is required. Fig-ure 1 illustrates how a 10Ω resistor along with a $10\mu F$ and a .01 μ F bypass capacitor should be connected to each V_{DDA} pin.

CRYSTAL INPUT INTERFACE

The ICS840001-31 has been characterized with 18pF parallel resonant crystals. The capacitor values, C1 and C2, shown in Figure 2 below were determined using a 26.5625MHz, 18pF parallel resonant crystal and were chosen to minimize the ppm error. The optimum C1 and C2 values can be slightly adjusted for different board layouts.
