Note: *1. GAIN SET

It is possible to set TG1 and TG2 independently.

When the anti-shock is 1 (00011xxx), invert both TG1 and TG2 when the internal anti-shock is H.

- When CANCEL \$40 is sent, the status immediately preceding the auto sequence mode (just before \$4X is sent)
- The auto sequence mode starts with the first falling of the pin 40 input pulse (WDCK) after the \$4X transfer and the falling of latch pulse.

*5 RAM SET

- Values \$0 to SE (not \$F) can be set.
- The above set values are ones when WDCK (88.2KHz) is input to pin 40.
- The RAM is preset when the power is switched on and the internal initial/set values are as follows:
