

THREE TERMINAL POSITIVE VOLTAGE REGULATORS 5V, 8V, 12V, 15V.

KIA78M×× Series of three-terminal positive voltage regulators employ built-in current limiting, thermal shutdown, and safe-operating area protection which makes them virtually immune to damage from output overloads. With adequate heatsinking, they can deliver in excess of 0.5A output current.

FEATURES

- Output current in excess of 0.5A.
- No external components.
- Internal thermal overload protection.
- Internal short circuit current limiting.
- Output transistor safe-area compensation.
- Available in TO-220AB and TO-220IS package.

MAXIMUM RATINGS (Ta=25°C)

CHARACTERISTIC	SYMBOL	RATING	UNIT
Input Voltage	V_{IN}	35	V
Power Dissipation	P_D	Internally Limited	(Note1)
Operating Junction Temperature	T_j	-40~125	°C
Storage Temperature	T_{stg}	-55~150	°C
Soldering Temperature (10 seconds)	T_{sol}	260	°C

- * Note1 : • Thermal Resistance Junction-Cases.
($R_{QjC}=5^{\circ}C/W.$)
• Thermal Resistance Junction-Air.
($R_{QjA}=65^{\circ}C/W.$)

KIA78M05P/PI ~ KIA78M15P/PI

Design Considerations

The KIA78MXX fixed voltage regulator series has built-in thermal overload protection which prevents the device from being damaged due to excessive junction temperature.

The regulators also contain internal short-circuit protection which limits the maximum output current, and safe-area protection for the pass transistor which reduces the short circuit current as the voltage across the pass transistor is increased. Although the internal power dissipation is automatically limited, the maximum junction temperature of the device must be kept below +125°C in order to meet data sheet specifications. An adequate heatsink should be provided to assure this limit is not exceeded under worst-case operating conditions (maximum input voltage and load current) if reliable performance is to be obtained.

* Required if regulator input is more than 4 inches from input filter capacitor (or if no input filter capacitor is used).

** Optional for improved transient response.
