APPLICATION INFORMATION

Logic Part.

First of all, if you let the μ -com operate, the pin25 has to connect to the GND.

The KA22293 obtains the μ -com data such as following Timing diagram, and then, converts the data from the serial to the parallel type by the use of the internal Analog switches.

The signal inputted from the μ -com, consists of the 12 Bit serial data, and the data consists of the 4Bit address and the 8 Bit data for the selection of the switch input.
