OPE5294

The OPE5294 is GaAs infrared emitting diode that is designed for low forward voltage and high reliability. This device is optimized for efficiency at emission wavelength 940nm and has a high radiant efficiency over a wide range of forward current. This device is packaged T1-3/4 plastic package and has wide beam angle with lensed package and cup frame.

FEATURES

- High-output power
- Wide beam angle
- High reliability
- Available for pulse operating
- Low cost

APPLICATIONS

- Optical emitters
- Optical switches
- Smoke sensors
- IR remote control
- IR sound transmission

STORAGE

- Terms: within 3 months from production date
- Remark : Once the package is opened, the products should be used within a day. Otherwise, it should be keeping in a damp proof box with desiccants.
- * Please take proper steps in order to secure reliability and safety in required conditions and environments for this device.

• Condition: 5°C~35°C,R.H.60%
