DESCRIPTION

Transil diodes provide high overvoltage protection by clamping action. Their instantaneous response to transient overvoltages makes them particularly suited to protect voltage sensitive devices such as MOS Technology and low voltage supplied IC's.

Note 2: Pulse test : $t_p < 50$ ms.

Note 3: $\Delta V_{BR} = \alpha T \cdot (T_a - 25) \cdot V_{BR}(25^{\circ}\text{C})$.

Note 4: $V_R = 0$ V, $F = 1$ MHz. For bidirectional types, capacitance value is divided by 2.

Note 5: The curves of the figure 4 are specified for a junction temperature of 25°C before surge. The given results may be extrapolated for other junction temperatures by using the following formula : $\Delta V_{BR} = \alpha T \cdot [T_{amb} - 25] \cdot V_{BR}(25^\circ C)$
 For intermediate voltages, extrapolate the given results.
