**Ultra High Speed Rectifiers
RUR-D810 RUR-D815 RUR-D820**

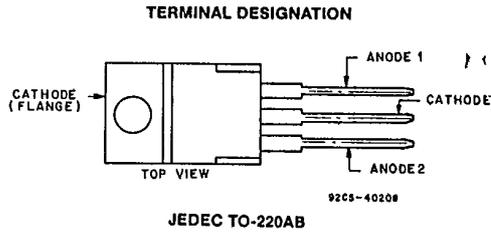

**Dual 8-A, High-Speed, High Efficiency
Epitaxial Silicon Rectifiers**

Features:

- Ultra fast recovery time (<35 ns)
- Low forward voltage
- Low thermal resistance
- Planar design
- Wire-bonded construction

Applications:

- General Purpose
- Power switching circuits to 100 kHz
- Full-wave rectification

The RCA RUR-D810, RUR-D815, and RUR-D820* are low forward voltage drop ultra fast-recovery rectifiers ($t_{rr} < 35$ ns). They use a glass passivated ion-implanted epitaxial construction.

These devices are intended for use as output rectifiers and fly wheel diodes in a variety of high-frequency pulse-width modulated and switching regulators. Their low stored

charge and attendant fast reverse recovery behavior minimize electrical noise generation and in many circuits markedly reduce the turn-on dissipation of the associated power switching transistors.

All are supplied in TO-220AB plastic packages.

*Formerly RCA Dev. No. TA9224A, TA9224B, and TA9224C, respectively.
