

OVERVIEW

SM6610 series is high-accuracy temperature sensor IC in the ultra small package. By using CMOS circuit, it realizes low voltage and low current consumption. The power down function contributes to decrease the current consumption of application set by activating intermittent function easily.

FEATURES

- High linearity: $\pm 0.5\%$ typ. ($T_a = -20$ to 80°C)
- Operating temperature range: -40 to 100°C ($V_{DD} \geq 2.7\text{V}$)
- Maximum output current load: $\pm 250\mu\text{A}$
- Output reference: VSS
- Low current consumption: $5.5\mu\text{A}$ typ. ($T_a = 25^\circ\text{C}$)
- Low stand-by current: $0.5\mu\text{A}$ max.
- Very small plastic package: SC82AB
- Very small leadless package: VSP-4
- Power down function
- Molybdenum-gate CMOS Process
