#### DESCRIPTION

The ST485E is al low power transceiver for RS-485 and RS-422 communication. Each driver output and receiver input is protected against  $\pm$ 15KV electrostatic discharge (H.B.M.) (ESD) shocks, without latcup. These parts contain one

driver and one receiver in half duplex configuration.

This transceiver draw 300µA (typ.) of supply current when unloaded or fully loaded with disabled drivers.

It operates from a single 5V supply.

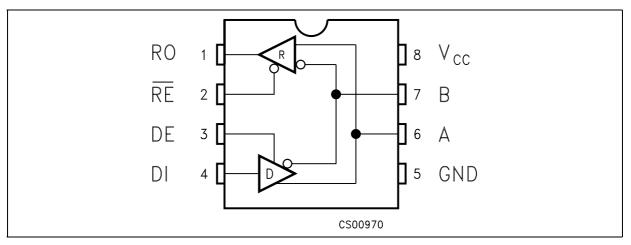

Driver is short-circuit current limited and is protected against excessive power dissipation by thermal shutdown circuitry that place the driver outputs into a high-impedance state.

The ST485E is designed for bi-directional data communications on multipoint bus transmission line (half-duplex applications).
