

SANYO	No. 5173	STK405-120
	2ch AF Power Amplifier (Split Power Supply) 80W + 80W min, THD = 10%	

Overview

The STK405-120, a member of the STK405-000 series, is a low-cost, 2-channel audio power amplifier hybrid IC that is ideal for a wide range of stereo sets. It has dedicated 6Ω output drive, in contrast with the STK401-000 series which supports $6\Omega/3\Omega$ output drive.

Features

- Class B amplifiers
- Output load impedance $R_L = 6\Omega$ support
- EIAJ-output compatible ($f = 1\text{kHz}$, THD = 10%)
- Low supply switching shock noise
- Pin assignment grouped into individual blocks of inputs, outputs and supply lines to minimize the adverse effects of pattern layout on operating characteristics
- External bootstrap circuit not necessary
- Standby operation possible using external circuit
- Voltage gain $V_G = 26\text{dB}$ for easy gain distribution within the set
- Member of 10W/ch to 80W/ch pin-compatible series

Notes.

All tests are measured using a regulated voltage supply unless otherwise specified.

Available time for load short-circuit and output noise voltage are measured using the transformer supply specified below.

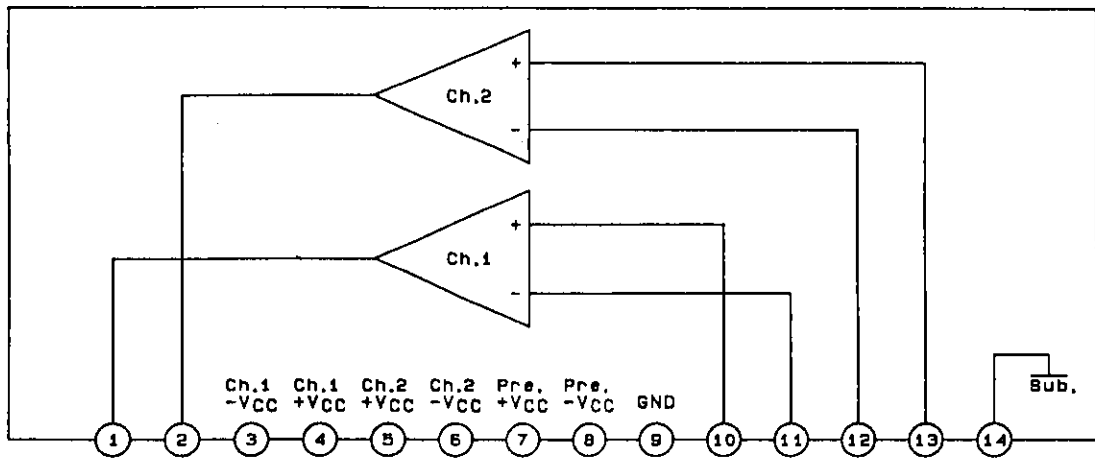

The output noise voltage is the peak value of an average-reading meter with an rms value scale (VTVM). A regulated AC supply (50Hz) should be used to eliminate the effects of AC primary line flicker noise.

Specified Transformer Supply (MG-200 or Equivalent)

From expression (1): $\theta_{c-a} < (125 - 50)/53$
 < 1.41

From expression (2): $\theta_{c-a} < (150 - 50)/53 - 1.8/4$
 < 1.43

Therefore, to satisfy both expressions, the required heat-sink must have a thermal resistance less than 1.41°C/W.

This heatsink design example is based on a constant-voltage supply, and should be verified within your specific set environment.
