For optional high reliability screening or higher zener voltages, consult SSDI MARKETING Department.

**Notes:**

- All voltages are measured with automated test set using 35 msec test time. Longer or shorter test times will have a corresponding effect on the measured value due to heating effects.
- Unless specified otherwise, ratings based on 25° C case temperature.
- Pulse width (tp) is defined as the time from rated peak pulse current IPP to the point where peak pulse current decayed to 50% of rated IPP. (10ms X 1000ms waveform as defined by R.E.A.)
- Part Number- For 5% Voltage Tolerance, specify "B" in place of "A"
