Description

STA8058 Teseo MCM is a fully embedded GPS engine integrating STA2058 Teseo baseband, and STA5620 RF front-end. The embedded flash memory enables the equipment manufacturer to load the entire GPS software (including tracking, acquisition, navigation and data output) after customising its interfaces to his needs.

A standard GPS library is available from ST. By combining the ARM7TDMI microcontroller core with on-chip FLASH/RAM, 16-channel GPS correlator DSP, RF Front-end and an extensive range of interfaces on single package solution, the STA8058 provides a highly-flexible and cost-effective solution for GPS applications.
