

# Features of the IMST® Hybrid ICs

## Excellent heat dissipation

- One of the most influential factors determining reliability of electronic devices is "heat". The IMST substrate is most suitable for the field of power electronics, dissipating heat efficiently.

Comparison of chip resistor temperature rises  
[IMST®'s values are about 1/4 of PCB's.]

Comparison of copper foil fusing currents  
[IMST®'s values are about 4 times of PCB's.]

## High reliability

- Wiring is applied by mounting semiconductor bare chips directly and bonding aluminum wires. This reduces number of soldering points assuring high reliability.

## Excellent electromagnetic shielding

- Excellent electromagnetic shielding can be attained by putting the entire substrate on the ground potential because the base substrate is made of aluminum. This eliminates noise errors in the digitalized electronic devices.

## Ample lineup

- STK series lineup is ample and standard based whereas the current hybrid IC market tends to customization.

Output power (per channel)	: 5 to 200W
Total harmonic distortion	: 10 to 0.005%
Number of channels	: 1 to 3ch.
Load impedance	: 1 to 8 $\Omega$

## Pin compatibility

- The design takes pin compatibility of the hybrid IC output pin important so that a same PCB can be used for various set grades such as output capacity and distortion factor.

## Excellent thermal stability

- The IMST substrate of excellent heat dissipation naturally assures excellent thermal conductivity. Temperature of the output transistor can be almost the same as the temperature compensating transistor, preventing thermal runaway.

## Decreasing adjustment processes

- Adjustments of the neutral voltage of the power output stage and the quiescent current are done by functional trimming inside the hybrid IC. This eliminates adjustment processes saving on the production procedure.

## Reducing the term for design

- The audio output stage remains analog however digitalization technology may advance. Design of the analog power output stage, which is considered requiring the designer's experience and skill, can be simplified by employing hybrid ICs. This reduces the term for design and saves on the design procedure.

## Decreasing number of parts

- The product of STK series decreases the total number of parts required for a unit, allowing to reduce its size, certain assembly manpower, simplify material control, improve serviceability and reduce cost.

## No smoke for fire

- Since the product of STK series is designed so to emit no smoke nor fire in any abnormality, it facilitates to obtain safety approvals.

**【Caution】** In case of 3 channel different output STK400 - 450, STK400 - 650 series, maximum power supply Vccmax and recommend power supply Vcc in the list shows numerical value of power supply of center channel. The numerical value of the power supply for L, R channel is same as 2 channel amplifier STK401 - 010 series which is same output.
