

## 2 to 6W audio power amplifier with preamplifier

TDA1011A

The TDA1011A is a monolithic integrated audio amplifier circuit in a 9-lead single in-line (SIL) plastic package. The device is especially designed for portable radio and recorder applications and delivers up to 4 W in a  $4 \Omega$  load impedance. The device can deliver up to 6 W into  $4 \Omega$  at 16 V loaded supply in mains-fed applications. The maximum permissible supply voltage of 24 V makes this circuit very suitable for d.c. and a.c. apparatus, while the low applicable supply voltage of 5,4 V permits 9 V applications. The power amplifier has an inverted input/output which makes the circuit optimal for applications with active tone control and spatial stereo. Special features are:

- single in-line (SIL) construction for easy mounting
- separated preamplifier and power amplifier
- high output power
- thermal protection
- high input impedance
- low current drain
- limited noise behaviour at radio frequencies

**HEATSINK DESIGN**Assume  $V_p = 12$  V;  $R_L = 4 \Omega$ ;  $T_{amb} = 60$  °C maximum;  $P_o = 3.8$  W.

The maximum sine-wave dissipation is 1.8 W.

The derating of 10 K/W of the package requires the following external heatsink (for sine-wave drive):

$$R_{th\ j-a} = R_{th\ j-tab} + R_{th\ tab-h} + R_{th\ h-a} = \frac{150 - 60}{1.8} = 50 \text{ K/W.}$$

Since  $R_{th\ j-tab} = 10$  K/W and  $R_{th\ tab-h} = 1$  K/W,  $R_{th\ h-a} = 50 - (10 + 1) = 39$  K/W.

## Notes

1. Measured with an ideal coupling capacitor to the speaker load.
2. Measured with a load resistor of  $20\text{ k}\Omega$ .
3. Measured with  $R_2 = 20\text{ k}\Omega$ .
4. Measured at  $P_0 = 1\text{ W}$ ; the frequency response is mainly determined by  $C_1$  and  $C_3$  for the low frequencies and by  $C_4$  for the high frequencies.
5. Independent of load impedance of preamplifier.
6. Unweighted r.m.s. noise voltage measured at a bandwidth of 60 Hz to 15 kHz (12 dB/octave).
7. Ripple rejection measured with a source impedance between 0 and  $2\text{ k}\Omega$  (maximum ripple amplitude: 2 V).
8. The total current when disconnecting pin 5 or short-circuited to ground (pin 9).
9. The tab must be electrically floating or connected to the substrate (pin 9).
