## Video IF Amplifier for Multistandard TV and VTR

### Technology: Bipolar

#### **Features**

- Standard B/G-L suitable, processes negatively and positively modulated IF-signals with equal polarity of the output signal
- Ultra white inverter and ultra black limiter for reduc-• ing transmission interference
- Internally noise protected gain control, no flyback . pulses required
- Expanded video frequency response allows the demodulation of amplitude modulated MAC signals

- High input sensitivity
- Fast AGC by controlled discharge of the AGC capacitor

Standard L mode: AGC acting on peak white level, capacitor discharge control by averaged video signal

Standard B/G: AGC acting on the sync. pulse peak

The direction of the AFC curve is selectable indepen-• dently from the standard switch

Figure 1. Block diagram

Case: DIP18

# TDA4439

### **Pin Description**

Pin	Function						
1, 18	IF input						
2	Standard switch: open B/G						
	ground L						
3, 17	Ground						
4	IF-AGC storage capacitor						
5	AGC (tuner control)						
6	Tuner AGC take over						
7	Polarity switch:						
	open AFC "DOWN"						
	ground AFC "UP"						
8, 11	Demodulator circuit						
9, 10	AFC circuit						
12	AFC output						
13	Average capacitor standard L						
14	Video output						
15	Supply voltage						
16	n.c.						
2 The second							

## **Circuit Description**

The following function units are integrated in this circuit combination for video-IF processing:

- Three symmetric, highly stable, gain controlled wideband amplifier, quasi galvanic coupling eliminates feed back
- Video carrier controlled demodulator of high linearity
- Polarity switch over for video and AFC-signal
- Video output amplifier with low-pass characteristics, limiter for ultra black and inverter for ultra white interference

Disconnectable AFC – generator with push pull current output

High impedance, interference free controlled voltage facilities, best possible AGC time constant with small storage capacitor

- Controlled discharge circuit for fast gain control
- With VTR operation the video output level is according to the ultra white level in B/G, ultra black level in L

## **Absolute Maximum Ratings**

Reference point pin 3, unless otherwise specified

Parameters	Symbol	Value	Unit	
Supply voltage	Pin 15	VS	10 to 15	V
Supply current	Pin 15	IS	75	mA
Open loop voltage	Pin 5	V <sub>5</sub>	V <sub>S</sub>	V
External voltage	Pin 4	V4	10	V
	Pin 14	V <sub>14</sub>	8	V
Breaking current for VTR operation	I <sub>4</sub>	0.5	mA	
Video output current

### **Ozone Depleting Substances Policy Statement**

It is the policy of TEMIC TELEFUNKEN microelectronic GmbH to

- 1. Meet all present and future national and international statutory requirements.
- 2. Regularly and continuously improve the performance of our products, processes, distribution and operating systems with respect to their impact on the health and safety of our employees and the public, as well as their impact on the environment.

It is particular concern to control or eliminate releases of those substances into the atmosphere which are known as ozone depleting substances (ODSs).

The Montreal Protocol (1987) and its London Amendments (1990) intend to severely restrict the use of ODSs and forbid their use within the next ten years. Various national and international initiatives are pressing for an earlier ban on these substances.

**TEMIC TELEFUNKEN microelectronic GmbH** semiconductor division has been able to use its policy of continuous improvements to eliminate the use of ODSs listed in the following documents.

- 1. Annex A, B and list of transitional substances of the Montreal Protocol and the London Amendments respectively
- 2. Class I and II ozone depleting substances in the Clean Air Act Amendments of 1990 by the Environmental Protection Agency (EPA) in the USA
- 3. Council Decision 88/540/EEC and 91/690/EEC Annex A, B and C (transitional substances) respectively.

**TEMIC** can certify that our semiconductors are not manufactured with ozone depleting substances and do not contain such substances.

We reserve the right to make changes to improve technical design and may do so without further notice. Parameters can vary in different applications. All operating parameters must be validated for each customer application by the customer. Should the buyer use TEMIC products for any unintended or unauthorized application, the buyer shall indemnify TEMIC against all claims, costs, damages, and expenses, arising out of, directly or indirectly, any claim of personal damage, injury or death associated with such unintended or unauthorized use.
