### Description

The TS431 is a low-voltage, three-terminal, programmable shunt voltage reference.

The output voltage can be set to any value between  $V_{ref}$  (1.24V) and 6V with two external resistors.

The TS431 is able to operate at a lower voltage (1.24V) and lower cathode current than the widely used TL431 and TL1431 shunt voltage reference.

When driving an optocoupler, the TS431 is particularly useful for regulating 3.3V switching power supplies.

### 3 Package mechanical data

In order to meet environmental requirements, STMicroelectronics offers these devices in ECOPACK<sup>®</sup> packages. These packages have a Lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an STMicroelectronics trademark. ECOPACK specifications are available at: [www.st.com](http://www.st.com).
