DESCRIPTION

The TS97x family operational amplifiers is able to operate with voltages as low as $\pm 1.35V$ and featuring output Rail to Rail signal swing. The TS97x boasts characteristics that make them particularly well suited for portable and battery-supplied equipment. Very low noise and low distortion characteristics make them ideal for audio pre-amplification.

The TS971 is housed in the space-saving 5 pins SOT23 package which simplifies the board design because of the ability to be placed everywhere (outside dimensions are 2.8mm x 2.9mm)

APPLICATIONS

- Portable equipments (CD players, PDA)
- Portable communications (cell phones, pagers)
- Instrumentation & sensing
- Professional audio circuits

1. All voltages values, except differential voltage are with respect to network ground terminal.
 2. Differential voltages are non-inverting input terminal with respect to the inverting input terminal.
 3. The magnitude of input and output voltages must never exceed V_{CC} +0.3V.
 4. Short-circuits can cause excessive heating and destructive dissipation.
