

### PROTECTION PRODUCTS - EMIClamp™

#### Description

The EClamp™2422N is a (C-L-C) low pass filter array with integrated TVS diodes. It is designed to suppress unwanted EMI/RFI signals and provide electrostatic discharge (ESD) protection in portable electronic equipment. This state-of-the-art device utilizes solid-state silicon-avalanche technology for superior clamping performance and DC electrical characteristics. It has been optimized for **protection of headset audio ports** in cellular phones and other portable electronics.

The device consists of two identical circuits comprised of TVS diodes for ESD protection, and a C-L-C pi-filter for EMI/RFI filtering. A typical inductor value of 2nH and a capacitor value of 100pF are used to achieve 20dB minimum attenuation from 800MHz to 2.7GHz. It has a very low series resistance of 2 Ohms, making it ideal for use on headset speaker interfaces. The TVS diodes provide effective suppression of ESD voltages in excess of  $\pm 15\text{kV}$  (air discharge) and  $\pm 8\text{kV}$  (contact discharge) per IEC 61000-4-2, level 4.

The EClamp2422N is in a 6-pin, RoHS/WEEE compliant, SLP1510N6 package. It measures 1.45 x 1.0 x 0.58mm. The leads are spaced at a pitch of 0.5mm and are finished with lead-free NiPdAu. The small package makes it ideal for use in portable electronics.

#### Features

- ◆ Bidirectional EMI/RFI filter with integrated TVS for ESD protection
- ◆ ESD protection to **IEC 61000-4-2 (ESD) Level 4,  $\pm 15\text{kV}$  (air),  $\pm 8\text{kV}$  (contact)**
- ◆ TVS working voltage: 5V
- ◆ Inductor: 2nH (Typical)
- ◆ Capacitors: 100pF (Typical at VR = 0V)
- ◆ Protection and filtering for two lines
- ◆ Solid-state technology

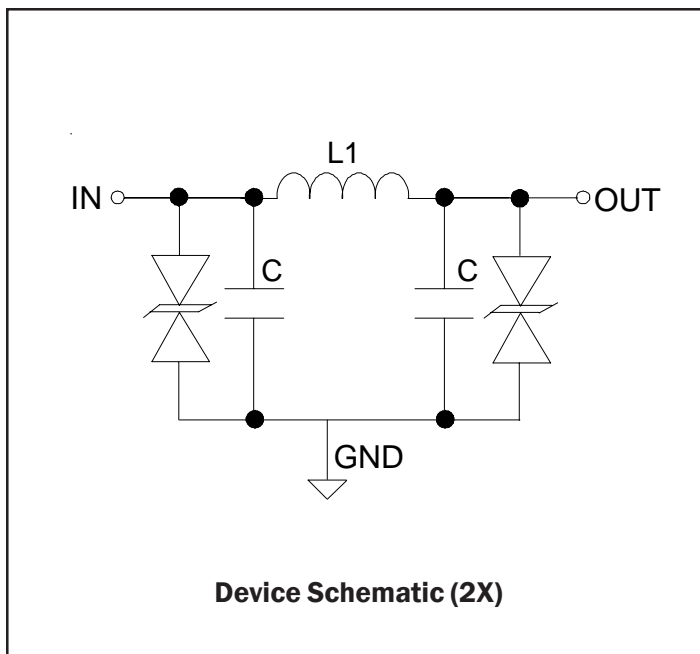

#### Mechanical Characteristics

- ◆ SLP1510N6 6-pin package
- ◆ RoHS/WEEE Compliant
- ◆ Nominal Dimensions: 1.45 x 1.0 x 0.58 mm
- ◆ Lead Pitch: 0.5mm
- ◆ Lead finish: NiPdAu
- ◆ Marking: Marking Code
- ◆ Packaging: Tape and Reel per EIA 481

#### Applications

- ◆ Cellular Handsets
- ◆ Speaker Ports in Portables
- ◆ Notebook Computers

### Applications Information

#### Device Connection

The EClamp2422N provides EMI filtering and ESD protection in a small SLP1510N6 package for speaker port applications. The equivalent circuit diagram is shown in Figure 1. The layout of the device is designed such that the data lines can be routed through the device. The first line pair enters at pin 1 and exits at pin 6. The second line pair enters at pin 2 and exits at pin 5. The device is symmetrical so the above connections may be reversed. Ground connection is made at pins 3 and 4.

#### Circuit Board Layout Recommendations for Suppression of ESD.

Good circuit board layout is critical for the suppression of ESD induced transients. The following guidelines are recommended:

- Place the TVS near the input terminals or connectors to restrict transient coupling.
- Minimize the path length between the TVS and the protected line.
- Minimize all conductive loops including power and ground loops.
- The ESD transient return path to ground should be kept as short as possible.
- Never run critical signals near board edges.
- Use ground planes whenever possible.
